- Users, Assignment rules.
- Bulk records insert, update and delete are handle with data loader.
- Working on the workbench and set the records from the third-party applications.

2. Internal Project

Duration: Aug 2021 - Present

Project Description:

This internal project is used to maintain employee records with the salesforce ecosystem. Once the onboarding employee record is created. Offer letter will generate automatically for the newly created employee records. Every month the pay slip will generate automatically for all the employees. Employee can submit their leave through the community cloud. Once the leave record is created in the sense the leave record automatically submit for approval and the employee will receive mail about the leave whether is approved or rejected. Main objective is to maintain the employee attendance to calculate the employee worked hours between the employee check-in and check-out through the community cloud. The employee can check-in and check-out one time a day.

Responsibilities:

- Had a weekly discussion with managers regarding requirement changes or updating.
- Developed the Apex Class, Triggers and Test Classes.
- Managing user's permissions via profiles, roles and users.
- Created the custom objects for store the employee records about attendance, leave, onboard and offboard.
- Worked on approval process to approve or reject the employee leave submission.
- Worked on process builder to send the relieving letter to the employee after the notice period of 90 days.
- Worked on the visualforce email template for the offer letter, payslip and Relieving letter.
