EXPERIENCE (5 -6 years)

Job position : Senior React. Js Developer (Single page Applications)

Node js web developer, mobile app developer (React js & React Native)

Skills :

1. Have good experience in developing the Mobile apps
With expo framework using React js & react native as programming language
2. Setting up the redux store , firebase , Mern full stack developer
3. Firebase authentication and backend support, Aws amplify Web services
4. Building apps from scratch to production to Google Play store
5. Doing end - end business projects using Expo framework ,express js , mongo db, node js with graph ql as query language
6. Have developed the E-commerce and consultancy apps using react native with expo framework & react native cli
- 7 Having great communication skills & leadership qualities
- 8 creating & deploying the rest apis or GraphQL apis
- 9 having experience with google apis for locations, live tracking

LANGUAGES

Good communication & coding skills in js

10 Have great skill in developing the single page applications using React js

framework & Firebase

11. Have Experience on Es - 6, javascript, redux middlewares like redux thunk,

12 Have experience on writing the unit test cases using unit testing tools like jest , enzyme

13 Good Knowledge on Version Control Git, Unit Testing , CiCd pipelines .

Express js projects:

Project 1:

In this project my role was to create the back end support for the E - commerce Application

Full Authentication and Password recovery system is enabled

Creating the products overview, product detail , cart system & orders screen & billing transcript in pdf is also designed in this application.

Front end is created using the ejs templating engines , html & css

The project is prepared using the mvc architecture, where most of the efforts were put to creating the controllers in this application

<https://github.com/uday1235/cactus.git>

Project 2:

A social networking feed platform was created using express js Mongodb & Rest api

In this project the user can authenticate himself & create a post in the feed

Image upload functionality , form in a model & rest api concepts have been used to create this project

The front end is created using React js Framework in which i have used class based components and have made api req calls to end points

The ui styling of this application is built using Css & React js library

The project was tested using unit testing tools like jest, enzyme

The project was built on Es - 6 standard

<https://github.com/uday1235/Overflow>

My successful builds:

<https://flyingbird-seven.vercel.app/>

1. A consultancy user interface built using the next js platform, which has tailwind css integrated into this project
2. React router is used for routing
3. User input data was passed using the query syntax of router to the next page
4. This application has a great user interface which is responsive , Google maps are yet to integrated to show the location
5. This project is a demonstration for real estate consultancy application
6. The project has been deployed after unit testing , from github through Vercel
7. The data for this application comes from the end point (Rest api) with the help of async await the data is fetched from the rest api.

<https://elaborate-youtiao-47f167.netlify.app/>

1. In this build, which is a model to create the E-commerce applications
2. The application was built using tailwind css as styling, firebase authentication,
3. Redux Logic was written to create the global state management system to data access to components
4. Redux Thunk was integrated as a middleware, for http requests using Axios.
- 5 . The application uses cloud functions for stripe payment gateway
6. The backend is supported by firebase for storing the orders data
- 7 . The application uses all modern react hooks for updating the state & Improving the performance of the application

Experience: 5 yr
