Projects:

Paytm money stocks Mini Application:

This is a hybrid mini app implemented using React Js which is available in Paytm homepage, it allows users to complete kyc journey and allows users to Buy and Sell the orders. Users can see the portfolio of the stocks they are holding. It also provides various other functionalities such as updating passcode, updating communication details etc. Implemented this app using React Js.

Paytm money Kyc Mini Application:

This is a hybrid mini app implemented using React Js which is part of many Paytm Money applications such as Paytm Money android app, Paytm Money IOS app , Paytm Money Web and Paytm Stocks mini app. It allows users to complete Kyc journey by submitting user data .

Paytm Money Equity Web Application:

This is an Equity application implemented using React Js which allows users to trade and invest in various companies . It provides a track of previous performance of listed companies and many other functionalities. I have contributed some features in this application such as Esign , communication details , Login page etc.

Realty Redefined:

This portal is for real estate property builders. The project focuses on online property enquiry and builder enquiry. The system allows the users to sell or rent the property. Using this one can search property based on the builder name or property or location. Basic search is the option to get information for property

Gharinvest:

Worked on projects listing using Symfony and AngularJs, where fetching the list of projects using Angular services and rendering using controllers and directories.

Implemented the custom services , directives and controllers in AngularJs.
