## Technical Projects

### ❖ TE Project

#### ❖ Clinic Management System:

**Technology:** Java      **BackEnd:** MySql

#### **Description:**

- The project clinic management is a standalone software developed to simplify the communication process between the doctor and the receptionist.
- The software would be operated by two users one is doctor and the other is receptionist.
- Receptionist would be responsible for creating and maintaining database of patients (Their treatment and medications). The doctor can thus view patient details and after checking up the patient, the recommended medicines for the particular patient are fed into the database by the doctor and are sent to receptionist.

### ❖ BE Project

#### ❖ Privacy Preserving Medical Data:

**Technology:** Java

#### **Description:**

- The privacy Preserving Medical Data is based on WMSN.
- To secure all our data all information is divided into three server by using Sharemind Technique, so that if one data hacked the patient and admin get notification that data has been hacked.
- By using paillier cryptography Encryption & Decryption is done. This is how all data is secured.

## Company Project Overview

**Project Name:** Abbvie

**Technology:** Salesforce

**Description:**

- Worked with PAP(patient assistant program)
- In which can contact through fax / phone.

This program is for the patients who are in US, who is facing financial issues, health insurance coverage and mainly the person who has US medicine license.

There are many roles/profile :-

1) Like patient access specialist where they check all missing information insurance.

2) And another one is patient access specialist lead

In which application re evaluation is available.
