## PROJECTS

### NVE, CloudBoost (NetWorker), 38 Months

**NetWorker** software is used for unified backup and recovery of the enterprise applications and databases.

**NVE(NetWorker Virtual Edition):** This Software is used for Uploading NetWorker System (with SUSE OS) to Public Cloud (AWS, Azure, GCP).

**CloudBoost Virtual Edition:** CloudBoost delivers optimized data protection for enterprise applications running in the public cloud, on-premises or both. Data Protection Suite with CloudBoost is a unified data protection solution that centralizes, automates and accelerates the backup and recovery of the cloud workloads.

Responsibility:

- Coding and integrations.
- Web services development and integrations.

### Syboss, 12 Months

**Syboss** provides end User Interface for one of the Salesforce clients. This is a multi-tenant architecture. We have used Apartment gem and There are three types of users in this application i.e Admin, Employee and Customer

#### **Zuora Catalogs:**

Zuora Catalogs is a web based application, which is used for uploading and maintaining different types of catalogs data to the Zuora billing systems.

Responsibility:

- Coding and integrations.
- Web services development and integrations.

### Ticket Simply, 13 Months

This is the product of Bitla Software Pvt Ltd. which is developed by Rails 5.

TicketSimply is a Bus Travel Technology Partner & Online Bus Ticketing Ecosystem.

TicketSimply offers Technology for Bus Operators with CRS(Routes & Schedules, Tariffs & Commissions, Branches & Agents, Bookings & Passengers, Security & Controls, Finances and lot more), Bus GDS, Bus Portals, Website CMS, Booking Engine & Payments Platform, Branded Mobile App Builder Platform, Business Intelligence & Analytics, Sales & Marketing with Campaigns, GPS Tracking & Passenger Alerts.

Responsibility:

- Coding and integrations.
- Web services development and integrations.

### Abvin- Broker Price Opinion, 7 Months

This is the new application which has been developed using Rails 5. This application is for the real-estate business process to buy and sell the properties. Clients can

compare the multiple properties details for specific areas and also can check rented house details. This application has integrated with Geocode (Google Map API) which has Street??s view and Satellite view that will help the employees to find the address for property. This application has four types of user i.e. Broker, Virtual Assistant, Photographer and Employee, here each user will have a sign-up process using confirmation through personal email which they have used in the sign-up process. Also uploading the multiple orders through CSV i.e. importing multiple orders details in application database and photographer can upload multiple images in a single time for particular property.

Responsibility:

- Involved in requirement analysis, SDS documentation and User documentation
- Involved in software Architecture , database

### **Dhama, 5 Months**

This application has been developed using Rails 5, this application is for Hotel booking online as well as offline . Customers can compare the multiple Rooms details. PayUMoney is integrated for Online payment.

Responsibility:

- Involved in requirement analysis, SDS documentation, User documentation, software Architecture and database relationship
- Involved in coding, design integration and bug fixing.

### **Plugin Customization for School ERP (Fedena), 15 Months**

This is the first project (FEDENA). A multipurpose school management software & student information system used by the educational institutions

**Term Wise Customization:** This plugin was developed as an add on to existing ERP because the existing software was not supported for term wise management. We made the customization accordingly so that terms are created for each batch and exams for each term. Since we have integrated terms for the batch most of the existing features are to be modified.

**Report Designer Plugin:** This plugin includes designing the reports for the students through an editor called TinyMce and rendering the pdf formats of the reports. Worked on searching for the suitable and user friendly editor for designing the reports. Worked on the issues of this report designer plugin.

**GVS Customization:** This plugin is customized for fee setting, hostel, visitors and attendance module and to generate reports for fee hostel, visitor and attendance report for students.

---
