SALESFORCE DEVELOPER

Profile

5.3 + years of development experience in Salesforce Lightning projects.

Employment History

Salesforce Consultant, Infoglen LLC

FEBRUARY 2021 – PRESENT

Projects:-

- **Client project on CLM:** working on an ongoing client project. Working on updating and migrating the existing CLM system having backward compatibility with the system. Responsibility includes communicating with the client, participating in Sprint activities, building new flows and enhancing existing functionalities.
- **Client project on Transfer Appliance:** worked on an existing client project. Transfer Appliance is a high-capacity storage device that enables to transfer and securely ship data to an upload facility, where data is uploaded to the Cloud Storage. Have built a functionality to track the field history and create a SLO/SLA report. Built a new flow for new appliances, and Inventory management. Have worked on enhancing existing functionalities. Responsibilities include building lightning components, writing batch classes and triggers, creating approval processes, and updating the existing components, batch classes, and apex triggers, creating documents for the new/updated functionalities, doing PoCs, and participating in project discussions.
- **In-house Product:** worked on an ongoing in-house product - the employee portal. Worked on a time-sheet module where users can log their daily hours, and a finance module to generate the invoices based on type of projects. Have helped in updating the architecture of the Timesheet module. Responsibilities include building lightning components, writing batch classes and triggers, updating the existing components, and participating in project discussions.

Software Engineer, Algoworks

JULY 2019 – JANUARY 2021

Projects:-

- **Client project on billing utility system:** worked on an existing billing utility product, implemented for a different region. Product targets both commercial and non-commercial customers. Responsibilities include developing as per the requirement and communicating with the client, participating in sprint activities, building new lightning components, integrating with external API, and updating existing components & batch classes.
- **REST Web services:** created REST Resource for fetching, creating, and updating data in Salesforce, and returning a response based on conditions. Code develop was used in a website page. Responsibilities include writing REST Resource and exposing it using Salesforce sites.
- **Integration project on billing system:** worked on an existing subscription based billing project for two-way syncing of the data between Salesforce and external systems. Responsibilities include creating and updating batch classes and building new lightning components.
