- Salesforce.com Certified Administrator – **19992690**
- Salesforce.com Certified App Builder – **21620081**

| Educational credentials |

- Bachelor of Technology in **Computer Science** from **JNTU, KAKINADA**.

| Professional Experience |

Project #1

Project Name: **The Family Collective**

Oct 2020 – till date

Company: Accrete Consulting

Role: Salesforce Developer

Description:

This application is related to giving families opportunities to stand against the isolation fostered by capitalism, by providing opportunities for families to reconnect with one another and build relationships with other families with similar core values.

Responsibilities:

Actively involved in client discussion for user stories grooming and technical challenges involved for the solution approach.

Monitored and guided the developer to implement the salesforce best practices and review the codes and other deployment procedures to the higher environment.

Involved in creating electronic form(Intake) using IWC libraries.

Created generic sequence process using force.com platform(apex) and considering all the best practices

while developing the problem.

Involved in data importing activity for several objects.

Involved in implementing complex validation rules, data modelling, process automation etc.,

Involved in release management activities from lower environment to higher environment.

Environments:

Salesforce.com Platform, Nonprofit success pack, ANT tool, Data Loader, VS Code, Trello Board.

Project #2

Project Name: **Cdm4Salesforce**

May 2020 – Oct 2020

Company: Accrete Solutions

Role: Salesforce Developer

Description:

This is a managed AppExchange Product which is related to sales operation for an organization. This product will calculate and maintain the incentives and rebates for the distributors, retailers and also contains different types of rebates programs can be easily configured by the customer once the product is installed on the customer's org.

Responsibilities:

Created several custom objects, validation rules, profiles, permission sets, process builders.

Imported data for different objects using data loader tool.

Involved in creating complex apex classes, triggers, web services class and lightning components for different business use cases.

Involved in implementing the best practices for making solid design for Apex classes, Triggers.

Created test classes and increased the code coverage to 90% across the managed package solution.

Involved in creating the technical design document for every user stories.

Involved in release management for entire end to end solution deployment from managed package instance to testing environment.

Environments

Salesforce.com Platform, VS Code, Data Loader, Git.

Project #3

Project Name: **Campaign Focus and Calendar Management**

Aug 2018 – Mar 2020

Role: Salesforce Developer/Admin

Description:

This project is a B2B application for one of the leading sports brands in Germany. Through this project we configured market strategies and developed calendar interface according to the business requirement.

Responsibilities:

Involved in client meetings to get requirements and involved in the development of all modules.

Creating several lightning components for objects like Campaign, Overarching, Calendar, Calendar Visualization Objects.

Developed several apex classes & triggers for market publish mechanism.

Worked on Test Cases for maintaining the code coverage of the org.

Created several email templates for configuring the publish mechanism for each market space as per the business required.

Involved in creating the validation process for consistency of data which was captured by the campaign publish mechanism.

Involved in developing the DAB Integration-for the backup of created campaigns & campaign lead data to other environment.

Involved in creating profiles, permission sets, relationships, validation rules, formula fields, OTIF report type etc.
Involved in creating field dependencies for global and local priority levels for the respective seasons.
Creating different layouts for the market and configured for different profiles like Global, OPC & Local Markets profiles according to the business requirement.
Involved in preparing post deployment steps for the user stories and configured the same in the higher environment.

Environment Used:

Salesforce.com Platform, VS Code, Jenkins, Bitbucket, Git, JIRA

Project #4

Project Name: **AG Consumer Service**

Sep 2016 – Jul 2018

Role: Salesforce Developer/Admin

Responsibilities:

Involved in client meetings to get requirements and involved in the development of all modules.
Worked with various Salesforce.com sObjects like Campaign, Accounts, lead, Contact and Opportunity.
Data migration from external systems to sales force using Data Loader.
Developed various Custom Objects, Tabs, Entity-Relationship data model, validation rules on the objects.
Defined lookup and master-detail relationships on the objects and created junction objects to establish connectivity between the Objects.
Managed users, hierarchical roles, profiles, security controls and territory management.
Created various Reports and Report Folders to assist managers to better utilize Salesforce as a sales tool and configured various Reports and for different user profiles.
Used Custom Settings, Remote Settings for Integrating with Third Party Platform as per the business requirement.
Designed and Developed Apex Classes, Client-Side Controllers, Server-Side Controllers and Apex Triggers for various functional needs in the application.
Used SOQL & SOSL for data manipulation needs of the application using platform database objects.
Writing Test Classes and increasing existing test coverage.
Used the sandbox for testing and migrated the code to the deployment instance after testing.
Used change sets for deployment.

Environment Used: Salesforce, Change sets, JIRA.
