## EDUCATION

**Shree Sardar Patel Vidhyalaya, Surendranagar Gujarat**

SSC - Secondary School Certificate

May 2009 - May 2010

**Shree Sardar Patel Vidhyalaya, Surendranagar Gujarat**

HSC - Higher Secondary School Certificate

June 2010 - April 2012

**Bachelor Of Engineering, Gandhinagar Gujarat**

B.E - Information Technology

August 2012 - June 2016

## EXPERIENCE

**Stridely Solutions Pvt Ltd - Ahmedabad, Gujarat**

Sr. Software Engineer

JUNE 2018 - PRESENT

Data Integration involves combining data residing in different sources and providing users with a unified view of them. This process becomes significant in a variety of solutions.

**Technobrain Solutions Pvt Ltd - Ahmedabad, Gujarat**

Software Engineer

OCTOBER 2017 - JUNE 2018

Worked as a hybrid mobile technology. Developed android and iOS application and published on respective platform: Play store & App store.

**Vyomwork Technology Solutions - Ahmedabad, Gujarat**

Jr. Software Engineer

April 2016 - September 2017

After completion of graduation, I took training and started working on a mobile hybrid platform: Microsoft Xamarin. After that, I've learnt how to develop mobile applications, how to test and publish them on their respective platforms..

## PERSONAL INFORMATION

Azure Web Job

Azure Blob Storage

Azure Key vault

Azure Data Factory

Azure Service Bus

API Management

Web API

Azure Application Insight

Azure Monitoring Tools

Diagnostics & Alerts

Azure SQL Server

CI/CD Pipeline

Azure Devops

## PROJECTS

### Azure Data Integration – Integration Projects

#### Stridelys Solutions Pvt Ltd

We've developed 100+ Logic apps, 10+ App services, Function apps, web jobs, 10+ Data Factories and many more azure services. We're providing continuous support and reprocessing required integrations on a daily basis. Below are the more details.

1. **SuccessFactors to DayForce Integration** – All the employees information is stored in the SuccessFactor system. For Payroll processes, we need all the details and the integration comes in the picture. Azure job calling SF API, fetched the details, generated XML and sent it to the DFS SFTP system.
2. **WorkForce to DayForce Integration** – In the WFS system, it stored all the hours and salary related information that needs to be sent in the DF system. For this integration, We fetch csv files from the WFS system and store the data in the staging table. According to the DFS system, Azure job generates the XML file and sends it the DFS SFTP.
3. **SuccessFactors to CRM Integration** – CRM system requires employees information and they are unable to pull it directly from SuccessFactors so we've developed the middleware integration where Azure jobs pull the data and CRM system fetch the details and will use it.
4. **SuccessFactors to Schwab Integrations** – Payroll system happens on bi-weekly basis. During the payroll some kind of changes happen based on leaves, refunds and withdrawals statements so all the process happens in the Schwab system.
5. **SuccessFactors to Equipement selection Integration** – When an employee will be hired then on-boarding process will start. First assign the Manager and then it select the required equipment details. Based on selection, Integration will send an IT help desk (Service Now) notification and manage all the equipment and easily track it accordingly.
6. **SuccessFactors to Fleet Performance Integration** – Fleet Performance is totally different projects where manager/lead can easily evaluate the driver performance, tracking details and take an action. With the help of BI team, they will generate the different types of reports as well.
7. **SuccessFactors to PoweBi** – Bi Team requires data in a data warehouse to generate the reports. For that Azure integration fetch data from SuccessFactor staging table and load it into the BI warehouse. It could be either full load or incremental load based on requirements..
8. **SAP to CRM Integrations** – One of leading integration for SVOs where all the details are stored in the SAP system: Customer, Floc,

## DEVELOPMENT TOOLS

Visual Studio

Visual Code

Azure Portal

Xamarin Studio

CI/CD Pipeline

Part, Booking and many others. Some processes happened in CRM and they were unable to fetch from SAP so Azure was in the pictures. Developed the integration and stored the data/details in the CRM database and accessed it easily..

9. **CRM to SAP Integrations** - Once data were in the CRM database then various scenarios happened like as booking was completed, partially completed, loss, won and many others. After that all the details need to be sync in the SAP system so call the iDOC using Azure system.
10. **API Migration (.Net Framework 4.6 to .Net 7)** - Day by day, new dot net versions will be launched and need to move on. They will deprecate the old version and nuget packages. In Our case, all the dot net code was developed in the old framework so we're working on migrating with the latest dot net version and making changes..
11. **CI/CD Pipelines** - We've developed CI CD pipeline to make the entire process automatically for publishing any azure services. For that we need to update the CI/CD code up to date with all the integrations and services. No direct publishing allowed in production.

## **Evoqua Water Technology - Mobile Application**

### **Stridelys Solutions Pvt Ltd**

It's a inhouse application for the sales department. Only a few employees can access this application. In the app, we've developed the functionality to fetch various data from CRM, PowerBi, SharePoint and other systems. Sales men can schedule the meeting, check the account information and address information and many others. It was developed on the iOS platform only.

## **My E3 Project - Mobile Application**

### **Vyomwork Technology Solutions**

It's a construction based project where contractors can upload pictures and the admin can like comments and favor the post. It was developed on the Android and iOS platform. We've provided the support and published the application.

## **ShiftWizard - Mobile Application**

### **Technobrain Solutions Pvt Ltd**

It's a product based application in which nurses can schedule duties, reschedule it with the help of admin approval, Conducted meetings and other medical procedures. Users can select the doctor appointment and book the slots as well. It was developed on the Android and iOS platform. We've provided the support and published the application.
