TECHNICAL SKILLS:

Languages : Python, C, HTML, CSS

Tools : KEIL μ Vision, PSPICE, Visual Studio Code, Sublime Text Editor, Arduino IDE.

Controllers : Arduino UNO.

PROJECTS:

Major Project : Object Tracking with Quadcopter using Python.

Role : Team Mentor

Description : Drones used for film making and surveillance are expensive in terms of money. Taking a camera shot involves a lot of affordance in building complex camera rigs. To overcome this problem, we started finding a cheap, effective and open source solution with this project. The very basic idea of this project is to track a human face within the camera frame which is sent over a wireless mode of communication to a remote desktop. The remote desktop processes the video feed in frames and tracks human faces within the camera frame which is powered by python. The remote desktop works as a station to process data coming from the camera module of the drone.

Mini Project : Static Electricity Generator (Van De Graff Generator)

Role : Team Mentor

Description : This course work is to understand the science of static electricity and its practical implementation. This is an amalgam of theories behind the working principle. We studied what is a Triboelectric series. Overall, this study is satisfactory and able to generate static electricity of high voltages which is detected by an electric spark.
