DasInfomedia Pvt. Ltd., Ahmedabad	Software Engineer	January 2013 – December 2013

Recent Projects

- ▶ GI Admin
- ▶ VenueServe
- ▶ Real Estate Cake
- ▶ Flockbet
- ▶ Remote Surveying Tool

GI Admin

- ▶ GI Admin is a kind of statistics website which contains all the information regarding all the projects status.
- ▶ Users can visit the dashboard which contains live rally platform details for each project and progress as well.
- ▶ Admin can easily find from the dashboard itself if any project is going in the wrong directions and can take action accordingly.
- ▶ For the developer role we have one more dashboard which contains application details for each environment.
- ▶ **Technology**: Angular 12, Material UI, SQL, JAVA, Git

VenueServe

- ▶ VenueServe is event management portal from where the event manager will create event, Setup event timing, Total seats, Ticket price, Discounts and finally publish his/her event.
- ▶ We have configured box office public URL where all the upcoming events are listed. End user can select event to join and can pay the ticket price. Users can then attend events. Once event is completed, we have updated the status of that event to completion.
- ▶ We have implemented stripe payment gateway for the transaction.
- ▶ Event manager can check the reports of his/her events later on.
- ▶ **Technology:** Angular 13, Node.js, Express.js, Bootstrap, MySQL, Git

Real Estate Cake

- ▶ RealEstateCake is a platform where both buyer and seller will come together to finalize the property dealing.
- ▶ Buyer can find the property posted by Seller for the rent or buy.
- ▶ Sellers need to register in the system and pay some portion of amount to the system to be listed his/her property in the first order so that buyer can find it easily.
- ▶ We have applied chat feature between buyer and seller.
- ▶ **Technology**: Angular, Node.js, Express.js, Bootstrap, Firebase, Git

FlockBet

- ▶ Flockbet is a online betting application with specific algorithm of crashing value. Game will continuously running on. User can place a bet for the next game and can win the $X * \text{crashing point number}$ of amount.
- ▶ Game is based on the random number and displayed in the graph with increasing numbers. That number will be dynamic and crash at any point. If user places a bet and clicks on cashout before game number crashes then he/she will consider as winner. If game number is crashed and user is not able to click on cashout button then he/she will consider it as a loss and bet amount will be lost.
- ▶ We have integrated bitcoin integration in the application. User can use a hot wallet of bitcoin and place a bit with the amount from the wallet.
- ▶ We have integrated socket programming for the game, chat between all users in the game and updating status of users in the game.
- ▶ **Technology:** React, REDUX, Node.js, Express.js, FireBase, BootStrap, Git

Remote Survey Tool (SnapServe)

- ▶ Remote Surveying Tool is a platform where technician will fixed end user's boiler issues over online calls. It is a kind of online survey.
- ▶ We have implemented Twilio library for the features like sending SMS, email and Video call.
- ▶ Reality Dash Pro is developed using latest technologies like React as frontend and NodeJs as backend.
- ▶ It uses AWS s3 service to manage video call recordings of multiple customers as well as EC2 instance for deploying platforms.
- ▶ **Technology** : React, REDUX, Node.js, Express.js, AWS s3, Bootstrap, MySQL, Git, AWS EC2, PM2
