## Objective

Seeking a challenging Python Developer role that utilizes my expertise in web development, Python programming, and data analysis to develop innovative solutions. With experience in digital marketing and business analysis, I am well-equipped to understand client's needs and deliver solutions that align with their goals, while staying up-to-date with the latest industry trends and technologies.

## Coursework

- Python Development
- Relational Databases
- Cloud Integration
- Web Automation
- Data Science
- REST API
- Full Stack Development
- Linux OS
- PHP Codeignitor
- Object Oriented Programming (OOPS)
- Version Control

## Skills

**Languages:** Python, PHP, HTML, CSS, JavaScript, SQL, C++, Linux Commands

**Developer Tools:** VS Code, PyCharm, Jupyter Notebook, Notepad++

**Web Frameworks:** Flask, FastAPI, Django, Codeigniter, ORM, Bootstrap, REST API, Playwright

**Technologies:** Git/GitHub, GitLab, AWS EC2, AWSLambda, Apache web servers, Nginx, Jira/SCRUM, WebSocket, TCP/IP, HTTP/HTTPS, RESTful APIs, JSON, XML, Agile Development

**Database:** MySQL, SQLite, MongoDB, MariaDB, Redis

**Soft Skills:** Communication, Problem Solving and Critical Thinking, Self-learning, Presentation, Adaptability

## Projects

**Hotmail Automation** / Python, Playwright, WebSocket, PHP Codeignitor, FastAPI, MySQL, January 2023

- Created Python and Playwright bot for automated Hotmail actions: login, mail processing, and spam management.
- Employed multithreading for parallel processing, boosting efficiency.
- Developed RESTful APIs using FastAPI for CRUD operations.
- Utilized HTML, CSS, JavaScript, and PHP for frontend tasks in not spam processing.
- Implemented WebSocket for real-time communication between not spam machine and central server.

**Server Admin Panel** / Python, Django, Webhooks, Redis, Shell October 2022

- Designing a web application to manage server-side operations.
- Utilizing Linux, shell scripting, and web hooks for Linux server interactions.
- Implementing a CI/CD pipeline with AWS EC2 for deployment and Git for version control.
- Developing a Python script to collect and save action logs and information to a database via cron jobs.
- Integrating the PAYWIX payment gateway for server cost management.

**Live Stats Portal** / Python, Django, Webhooks, Redis, Shell January 2021

- Developed a web application to track the revenue, click and deliveries.
- Used Linux, shell scripting for Linux server operations.
- Create different web portals which will help in automating the reporting process.
- Implementing a CI/CD pipeline with AWS EC2 for deployment and Git for version control.
- The purpose of the Application is to Track the real time revenue and click and sales information.

## Experience

**Skylex Technologies Pvt Ltd** Sep 2019 – Jan 2024

Software Engineer

Pune, Maharashtra

- Designed and developed critical features, enhancing project functionality using Python, PHP, and various technologies.
- Collaborated with cross-functional teams to consistently deliver innovative solutions meeting project goals.
- Conducted regular code reviews, identified issues, and provided constructive feedback to maintain high-quality code and software reliability.
- Mentored junior developers, significantly improving their coding skills and overall productivity.

**Bachelor of Engineering, Computer Science**

Vidhya vikas college of engineering

July 2012 – May 2016

Solapur, Maharashtra
