Projects

Project : Insurance

Role: Salesforce Developer

Technology: Salesforce.com Platform

Description:

- Online Insurance is a web application which is used to tracking the details about the insurance policy, customer details and company details.
- Project is useful for any kind of insurance company to manage the insurance details, to sanction the insurance for customer, process the insurance policy details and all kind of insurance process through online.
- Project contains the user registration form which is used to apply for insurance policy through online. It also helps the customer to view their own insurance status information.
- If the user registered insurance policy to this website, it will process that registration form by verification and immediately give the temporary policy holder ID to the user.
- Submission of registration form the admin will process to verify that particular details registered by the customer and sanctioned the insurance policy. Then the admin send the permanent policy holder ID and password to the customer and also send status information about insurance policy to the corresponding policy holder.
- If the policy holder wants to view the information about their own policy details, he/she login to policy status page by using the policy holder ID and password had already given by insurance company and view their own details and also they give feedback to the insurance company.

Responsibilities:

- Worked with the user group for requirement gathering throughout the planning and requirement phase.
- Implemented Lightning Components to meet the required functionality.
- Implemented Apex Classes, Apex Triggers, Process Builder or configure components to implement expected functionality.
- Created Data Validation rules and Formulas as per business requirement
- Worked with various salesforce.com Standard objects like Accounts, Contacts, Leads, Reports, and Dashboards
- Troubleshoot issues, implemented and deployed solutions.

Project - Pharmacy

Role: Salesforce Developer

Technology: Salesforce.com Platform

Description:

- The user login module is used to grant access to other modules only for the authorized people on giving valid username and password.
- This module will allow the user to buy and enjoy the accessibilities if they have an account (User-Id & Password) .only admin can access have permission to change the password. When users have no account earlier they can create an account through admin.
- In the stock detail If the stock is available it shows the stock detail otherwise it does not show the details. If stock is not available it can be purchased.

- Bill detail module will show bill details. Whenever the bill number is entered it shows the product to be bought by the customer. It is very useful for resales of product and also to check the bill details of the certain customer.
- Purchasing module will give the information that supports to buy a fresh product or to sell a second hand product. Also it shows the icode, inumber, unit price, quantity, and amount. It will also give bill detail in it.
- Customizable dashboard provides an extensive view of the data for monthly and MIS reporting.
