## **1.CARE-V3 — Healthcare domain**

ROLE: [Senior Quality Assurance Engineer](#)

CARE is a Preventative Precision Medicine Platform that helps the patients to Identify and analyse the risk of getting cancer in future depending upon the hereditary. Care programs first educate the patient about the Gene therapy and depending upon the family cancer history of the patient calculate the level of risk and also suggest the recommended cancer tests. Post test sessions, depending upon the patient results, CARE arrange genetic Counseling for patients.

## **2.PestWatcher / Sense For Innovation— IOT domain**

ROLE: [Senior Quality Assurance Engineer](#)

### **PROJECT DETAILS:**

PestWatcher is an IoT based product. This product is used to establish a low cost communication network to build intelligence in pest management systems. Technically this is an end to end application which recognizes the pest activities using the sensors/devices deployed at client areas which will communicate through IoT networks or Internet and updates the information to Pestwatcher Apis. Pestwatcher parses the information and provides accurate information to the user about any activity that had occurred.
