Skills

Salesforce Lightning(Aura)

Apex Development

HTML & CSS

SOQL

Triggers, Workflow, Process Builder

Microsoft Excel

LWC

Seasoned salesforce developer working on **Lightening and LWC since 1 year** and on the **salesforce platform since 3.7 years**, looking for further opportunities on salesforce lightning, LWC and apex side. Passionate to learn, take up challenges, grow and add value to my employer while expanding my own knowledge base.

Employment History

IT Analyst, Tata Consultancy Services

June 2016 — Present

Salesforce Developer

- **GE Healthcare -Commercial Excellence(2017 to 2020)**
- **Service and sales cloud** in **healthcare** domain with a **Agile Framework**.
- Built custom app and developed custom lightening pages using **SLDS, events, lightening out**.
- Implemented **aura framework**, and lightening with a flavour of **Lightning Web Components**.
- Designed custom objects, custom fields, page layouts, and worked on workflow, approval process and triggers.
- Committed the code in Git Hub for its transition to other sandboxes, deployed using metadata API.
- Written test classes and test methods to ensure code coverage and debugged the code in limited time.
- Proficient at SOQL statements and data manipulation.
- Have attained a good understanding of salesforce architecture and object relations.
- Installing packages from App Exchange and customizing them.
- Have a good grasp of software implementation life-cycle (e.g., analyze, design, build, test, implement, support).
- **GE Healthcare-FusionSPM(2020-21)**
- Integrated with a **third-party managed package**, where we fetch customer's financial data from oracle, run calculations and display it on salesforce.

- Facilitated the configuration and set up its data and org defaults from scratch in salesforce environment.
- And build custom settings and **lightning pages with lightning web components and aura framework** to accommodate it and re-designed enhancements and modifications to suit client s' needs.
- Tested the build from users' perspective and debugging and resolving the issues caused due to package installation and salesforce limitations.
- Co-documented standard procedures, org limitations, gaps in functional documents.

Salesforce Data Analyst (6 months)

- Gathering business requirements from client, stakeholders and users and customizing data solutions according to their needs.
- Migrating Salesforce data from within org and sandboxes by Apex **Data Loader** and inspector , aware about all their limitations.
- Made DRM changes for thousands of users for 5 global region, got recognized by **CFO and won best team award**.
- Automated the file loading process bulk using **Microsoft macros**, saved time by **10hr/week** and command line item and apex **batch classes** which saved time by **20hours/object**.
- Administrated migration of data sources to Salesforce apps from legacy CRMs.
- Analyzed data integrity issues and developed data migration templates and documented data mappings, reports and data flow diagrams.
-

GE Digital-Front-end Java Developer(2016-2017)

- Have co-designed front end as per design requirements ,using **HTML, CSS, bootstrap, nodeJs** for controlling a major renewable energy solar plant from the website, displaying color-coding for warnings picked from the sensors and alerting the plant in case of risk.
- Communicated with server though API calls, using Restful services , JSON and JavaScript, tested it using **Postman**.
