### EMPLOYMENT:

---

**Senior Systems Engineer**

**Infosys**

**February 2018-Present**

#### **Salesforce Project**

- Developed a Session Management Application based on the concept of Conference Application on Trailhead.
- It has 4 Objects Session ,Speaker ,Hotel ,Claims and a junction object SessionSpeaker.
- The Speaker object has a visualforce page for creation of new speaker where the picture of the speaker can also be uploaded.
- The Hotel object has a button GetDirection which uses a visualforce page to show the hotel location on google map using google maps api.
- The claims object where the speaker can claim all his expenses has two record types one for sessions in India and the other for sessions in other countries.
- Restful Integration was used to connect the application with an exchange rate application which provides exchange rate and the claims amount is converted to INR automatically in case of sessions happening in other countries.
- The claims object has an approval process where the speaker can submit claims for approval.
- A trigger sends an email to the speaker whenever a session has been assigned to him using default Messaging class and also checks that a speaker is not assigned to multiple sessions happening on the same date.

#### **Infosys Training | February 2018 - July 2018 | Mysore**

- Trained in Python, RDBMS.
- Developed an application for restaurant room booking. The purpose of the project is to design an online platform where user can book hotel rooms and taxi. The integration of the application was done by calling the appropriate functions in each module to ensure smooth flow. Concepts of fundamental programming, OOPs & data structures along with DBMS are thoroughly used throughout the project.
