PROJECTS

1) E-Result and Attendance System

Description:

I worked as a Salesforce Developer doing production support activities. This system provides Student Attendance and E- Result System functions for the school. The major functions of this module included Student Registrations, monthly Attendance and Result to be sent to Parent.

Roles & Responsibilities:

- Developing Custom Objects, Custom Fields, Custom Tab and Validation Rule
- Functionality to send Email alert to Parents for monthly attendance and results of their child.
- Involved in Setting up Users, roles, profiles and Security settings.
- Creating Approval Process for approve the Leave.
- Created Workflow and Process Builder for email alert and Approval process for sending Emails.
- Created different components for user interface design using Lightning Web Component.
- Import and Export of the Data through Data Loader.
- Created Apex Classes and Triggers for updates the records.
- Creating Report and Dashboard was also implemented for better understanding of the project.

2) E-Policy System**Description:**

e-Policy System application to maintain data of Agent, Policy Holder and Policy that define the policy data according Insurance plan. The Main Objective of Project is to help Policy Holder and Agents to deal with the Policies efficiently and to make it paperless and more digitally organized.

Role & Responsibilities:

- Customize and personalize Salesforce.com based on client requirements
- Sending email to particular users using Workflow, Process Builder and Flow
- Created an Approval process based on dealing the policies by an agent
- Created triggers to calculate the no. of policies deal by the agent
