10+ lightning web components till date, still improving my skills by developing games using LWC OSS apps.

Experience

Project:Google ICE

Senior Salesforce Developer (November 2020 -Present)

- Authored a wide range of Apex triggers and classes till date according to Unified Trigger patterns.
- Successfully Developed a reusable lightning web component to upload 70K+ data sets on a monthly basis by validating both Client side and server side validations on the fly.
- Implemented an inventory management Application using a wide range of asynchronous apex processes which include batch apex,Queueable Apex with Job Chaining and Future methods to split transactions for processing large data on a day to day basis.
- Adhered to the CD/CI process for deploying to production by learning the concepts of version control systems like git and implementing branching strategies with Salesforce DX,Kokoro batch scripts to configure a streamlined CD/CI process of deployment.

Salesforce Developer(April 2018 -November 2020)

- Worked with 20+ clients in google in variety of Salesforce instances to shape up its Consumer Hardware Business
- Implemented the retail store management setup for google using aura components and asynchronous apex chaining which tracks 2000+ stores and its products under various accounts.
- Built an integration connection from salesforce to google maps api to get the geocodes for the retail stores.
- Successfully launched region specific contract agreement templates using lightning components to speed up the sales acquisition process for more than 50 Product Managers and increase the overall sales revenue.

Salesforce Administrator (December 2016 - April 2018)

- Implemented multi currency management to manage Campaigns in 18+ local currencies and convert all fiscal amounts into corporate currency using apex triggers for financial reporting.
- Worked on data modelling using object relationships as per business flow.
- Adept Experience in Data migration by using tools such as Apex Data Loader,Data Import wizard,workbench,Dataloader.io for importing large volumes of data.
- Collaborated with the team and configured Profiles,Permission sets,OWD and org level security like SSO and Multi factor authentication adhering to the concept of minimum access policy.
- Worked on salesforce automation tools like approval process,lightning flows, process builder,workflows and also analytical tools like Reports and dashboards for various reporting purposes.
- Implemented lightning communities using partner central template and customized communities for external users.
