Structured Query Language	<div><div></div></div>
Shell Scripting	<div><div></div></div>
Agile Development	<div><div></div></div>

## Work History

**2019-07 - Current**

### Application Development Analyst

*Accenture Solutions India Private Limited, Hyderabad, Telangana*

Worked with a North American automotive client for enhancement deliverable for their e-relationship management application. Electronic Vehicle Relational Management (eVRM) system allows users to access information about a VIN (Vehicle Identification Number) based upon their assigned access levels. The various levels of access determine the scope of VIN information that can be seen. The requirement came at the customer relations level wherein new tabs for case notes and case attachments were to be introduced in UI for ease of dealers to access Customer vehicle Case and Case Feed Information along with Supported Case Documents, which have been fed into CRM system, to be made available within a single section.

- Understood the Business Requirements as well the existing Data architecture supporting the application by coordinating with onshore counterparts and key project stakeholders on a daily basis.
- Understood and analyzed the nature of the metadata being worked upon.

- Worked on creation of Data pipelines and data ingestion for new enhancements on frontend application.
- Responsible for integration of data pipeline with frontend application.
- Responsible for creation, maintenance and fine tuning of various HQL, MapReduce and properties files across Data Lake.
- Responsible for ensuring 100% code coverage in Unit Testing , and involvement in Test Data mock-up and Test Support to ensure efficient QA delivery.

**2016-03 - 2019-07**

## **Software Engineer**

*Tech Mahindra Limited, Pune, Maharashtra*

Worked with a Canadian Telecommunications giant to deliver a Sales monitoring and Business Intelligence solution for one of its major web channels through data analytics.

Rogers.com is the main Interactive online portal targeted towards the e-business of the client. Primarily huge amount of all registered customer data specific to their Rogers Account are being processed and analyzed on our clusters on a weekly basis . Data cleansing and processing is undertaken by our team to aid in analysis of customer usage and behavior for implementation of targeted offers, targeted price and data plans, adverts, promotionals and various business decisions.

- Involved in daily calls involving various stakeholders (offshore and onshore) to understand the business requirements and agenda.
- Responsible in analyzing the customer requirements and application of appropriate solution
- Involved in creation and maintenance of Sqoop scripts and HQL scripts.
- Responsible in debugging of application and troubleshooting issues, and maintaining a detailed tracker about the issues.
- Worked with different file formats to optimise storage and transfer of data on and across cluster.
- Involved in unit testing, test data management, test support and issue troubleshoot to ensure efficient QA practice release on release.
