**Languages:** Php, JavaScript, Ajax, JQuery, HTML.  
**Database:** Mysql  
**Framework:** Laravel 8.

UIDAI Dashboard  
**Client:** UIDAI **Team Size:** 3

Jul 2020 – Sep-2020

With 124 crore plus Aadhaar generation achievement and passing of Aadhaar bill in parliament, Aadhaar has become pivotal for many government schemes. With increasing usage of Aadhaar, it has become imperative for UIDAI to make all relevant information pertaining to Aadhaar easily available to all residents of India. As on date, UIDAI has multiple portals to present dashboard information related to different stakeholders of the UIDAI ecosystem. Even though some of the existing portals such as Admin portal, Upload portal and print portal are providing required data related to KPIs of Business activities, the information is scattered. Hence there was a need to present these KPIs in a single window of information, which is relevant to management in the public domain. The effort was to provide single window information executed through a Dashboard to empower the public. Hence, it was proposed to host the new AADHAAR dashboard at UIDAI website (<https://uidai.gov.in/>), thus making it available for public view as well including UIDAI, Registrars, Enrolment Agencies and Operator stakeholders.

**Role:** Worked on the front end development for building components using React js library. Integrated backend API data to chart visualisation[Chart JS]. Worked on fixing issues in the application and UI upgradation in the application.

**Languages:** JavaScript.  
**Libraries:** React js, Redux Saga.  
**UI Framework:** Material UI.

Fusion MSME  
**Client:** Impact Micro Ventures **Team Size:** 3

Sep 2019 – Feb 2020

Loan management system for MSME organizations, this application is used to manage the loan giving process starting from collecting the KYC details, business details and household details of the loan applicant through a mobile application and verifying those data through a web application and sanction loan to the applicant after getting approval from all higher authorities. With the help of reports which are integrated into the application, EMI payment, the due amount can be tracked

**Role:** Worked on the frontend and backend end development using the laravel framework. Developed API for mobile application data consumption.

**Languages:** Php, JavaScript, Ajax, JQuery, HTML.  
**Database:** MongoDB, Mysql  
**Framework:** Laravel.

**Impaact and IMV**  
**Client:** Impact Micro Ventures **Team Size:** 1

Sep 2019 – Feb 2020

IMV (Impaact) Platform transforms micro financing in India. IMV Survey app empowers your credit officers with precise creditworthiness reports based on alternative data which enables them to identify the right and reliable prospect. Hence your lending portfolio risk is reduced considerably. IMV solutions are simple and accurate and provide the expertise required to gauge the creditworthiness of your prospect. You would just require a junior level field officer for effective operations. So your operating cost reduces

Based on Business details and household expenses collected from a mobile application, The ML model will give a repayment ability amount, wherein the web application the officers can verify the applicant data and proceed with the loan process.

**Role:** Feature enhancement, maintenance, and support in impaact and IMV project. Worked on the frontend and backend end development using the laravel framework. Developed API for mobile application data consumption.

**Languages:** Php, JavaScript, Ajax, JQuery, HTML.  
**Database:** Mysql  
**Framework:** Laravel.
