PROFESSIONAL EXPERIENCE

August 2021 to Present	Senior Software Engineer Apttus CPQ/Salesforce	Cygnnet Infotech Pvt Lmt., Pune
Hexagon, Conga	<p>Project Description: The requirement is to implement the Billing Module and add the customization in current CPQ implementation. This project also contains understanding of current implemented process for CPQ.</p> <ul style="list-style-type: none">✓ Added the customization to calculate the amount on the invoices and also worked on the logic to generate the invoices and invoice line item based on asset value summary.✓ Developed a custom class to make sure Asset value summary, invoices and Quote are in sync. <p>Project Detail: Client has decided to upgrade the Conga installed package to improve and fix the package related bugs and to give new User Experience to the end users also client wanted to install the new Billing Package with their own add on logic.</p> <ul style="list-style-type: none">✓ This Project includes the upgradation of Apttus/Conga packages to a newer version to avoid previous bugs. Interacted with Conga Support team to validate and fix the existing bugs which are part of the installed packages. Some of the common issues which was identified and fixed after	

	<p>the upgrade is Constraint Rule issue, Cart issues, Batch Class Fail issue, Apex Test Class Failing issue.</p> <p>Completed the installation of Conga Billing Package into the system.</p>
<p>January 2019 to August 2021</p> <p>BMC, Software, USA</p>	<p>Consultant <i>Cloudaction Technology, Pune</i> Apttus CPQ/CLM</p> <p>Project Detail: Quotes/Proposals and Agreement Management (Apttus CPQ and CLM)</p> <ul style="list-style-type: none"> ✓ This Project includes customizing Quote and Agreement generation process as per the requirement. The Process starts from creation Quote and then followed up with adding new Products/Renew the products to increase the quantity or End Date which moves ahead on the Pricing page where we can do Price adjustment or Price Discount. ✓ Once Quote is created, the flow is to send that for Approval and after the Approval we can create Agreement for the Quote. Used Apex Classes/Triggers/Workflows/Flows to perform any changes in the process as per the requirement.
<p>Mar 2021 to May 2021</p> <p>First American, India</p>	<p>Consultant <i>Cloudaction Technology, Pune</i> Lightning Experience</p> <p>Project Detail: Client has decided to update some existing Aura component Form into Lightning Web Component form to improve the performance of lightning record page.</p> <ul style="list-style-type: none"> ✓ Project is to implement a new LWC form which will be available on the Account, and which will be a part of Accounts Lightning Record page as a separate Tab. This form consists of a search and filter layout to search the required Account and when the Accounts will be selected then the account values should automatically populate to new text fields on the form. For ex. Account Name, Owner, Address, etc.
<p>Feb 2021 to July 2021</p> <p>BMC, Software, USA</p>	<p>Consultant <i>Cloudaction Technology, Pune</i> Salesforce Data migration</p> <p>Project Detail: This project was the phase-I of Service cloud data migration.</p> <ul style="list-style-type: none"> ✓ Migrated data for various service cloud objects such as case, case history, case comments, files Attachments, Account and case related custom object. ✓ Migrated the above data using data loader and snaplogic tool simultaneously.
<p>Sep 2020 to August 2021</p> <p>EXL Service, USA</p>	<p>Consultant,Lead <i>Cloudaction Technology, Pune</i> Salesforce/Remedyforce/ActionHub</p> <p>Project Detail: Implemented Structure for New tickets and Change Request feature on Salesforce Platform.</p> <ul style="list-style-type: none"> ✓ Implemented a new Ticketing tool functionality on Salesforce Platform which includes creation/modification of separate Objects/fields to store different module records. For Ex. Incident, Change Request, Problem. ✓ This includes creation of Lightning Experience Component as well to function both in Lightning and Salesforce Classic. ✓ Configured/Developed integration with the use of Actionhub application (part of AppExchange) to integrate Salesforce to JIRA. This integration functioned in a way that if any Salesforce Incident records gets created then a JIRA ticket will be created in JIRA environment with all the values like Description, status, etc. matched as per the requirement. Also, if any change will happen in JIRA like status update or comments, that will be updated to the record in Salesforce.

	<ul style="list-style-type: none"> ✓ Worked on the AD Integration to sync Users from Active Directory to Salesforce and implemented Single Sign On setting for the Users.
