PROJECTS

- ### Bus Reservation system (ASP.NET) using c#

  Bus reservation system is a web project which is developed in ASP.NET, c# and MySQL. The main object of this project is about ticket booking, managing admin account, bus schedule, bus route and can track the bus from initial stage to destination

- ### Smart Predicting Mirror (IOT)

  The objective of this project is to design a prototype of a device that acted as a "Smart Mirror" which displays the picture of the user and also provides customizable information

on the display. Smart Mirror is a device which acts as a conventional mirror although superimposing informational data, which can be changed and customized by the user at any instance of time. This mirror also provides touch freed user involvement with the data shown on the displays. Here users able to create their own profile and customize as per their interest to display specific data. In this scenario, we are displaying the data which are getting from smart monitoring system. Along with this we are including a gas monitoring system which enables to identify gas leakage and finds imminence gas leakages using appropriate sensors and alert the user about the problems, which eventually save lives.

TECHNICAL SKILLS

- Compiler C, C++, Basics of Python

- SQL

- HTML, CSS

- Java

MINOR ACTIVITIES

- Smart Dustbin

- Content writer at (Crunchstories.in)

- Library Management System using c++

- Home security using Raspberry Pi 3

LANGUAGES KNOWN

- Telugu - Native

- English – Fluent

- Hindi – Conversational

- Spanish – Beginner

Place: Vijayawada
