                                                        Mobile: 9866211730

Career Objective:

Having 4yrs 8months experience in Manual Functional Testing, API testing, Web services Testing and Database Testing with Banking, Retail & e-Commerce domain experience which includes the test cases design, test cases execution and Bug logging process. Active member into the team and followed the client design the process and guideline to delivered the productivity with zero escalations.

Technical Skills:

Web Services	:	**SOAP and REST**
API Testing Tools`	:	**SOAP UI, POSTMAN and REST Client**
Test Management Tools	:	**JIRA**
Languages	:	**XML, JOSN and SQL**
Testing Concepts	:	**Manual and API Testing**
Process Models	:	**Agile (SCRUM), Waterfall model and V-Model**
Data base	:	**Oracle and MySQL**
Operating Systems	:	**Windows OS**
Other	:	**MS office for documentation**
Automation	:	**API Automation with Data Driven**

Educational Qualifications:

- **Completed Master's Degree** from Osmania University.

Professional Experience:

Organization Name: LTECH Solutions Pvt Ltd
Designation: Test Engineer
Duration: **Oct 2018 to till date**

Technical Brief:

- Having around 4.8 years of experience in the field of **Software Testing and API Testing**
- Proficient Knowledge in Software Development Life Cycle ,Software Testing Life Cycle and Database Testing
- Having more than 3+ years of experience into the API Testing with POSTMAN tool
- Hands on experience into the design the test data for API Testing and validate the same with snippets
- Expertise in Test Case Design, Test Execution and Defect logging with JIRA
- Work experience into Agile methodology with sprint events
- Involved into the Agile ceruminous like Planning, Review, Retro, Daily scrum and Demo calls
- Overall 3+ years of experience into the API testing with POSTMAN tool with JSON payload
- Exposure of JSON files and Prepare the Test data as per scenarios and Swagger
- Very good knowledge on HTTP Methods and HTTP status codes.
- Good understanding on the usage of URI, API, HTTP, JSON, JSON Path and HEADERS.
- Exposure into various environment testing for both web application and REST API services
- Hands on experience into Data Driven Testing and Collections with POSTMAN Tool
- Great experience into POSTMAN Snippets for Response validation and API chaining
- Run the collections for APIs group execution with Runner options
- Good understanding of the collections and usage of the collections for API Testing

- Basic knowledge on SOAP UI tool with Assertions, Properties and Property Transfer
- Exposure into generate the reports using Newman and setup environments
- Work experience into the Testing the application with various environments
- Good understanding of Swagger, RTM, Service documents and Test plan
- Practical knowledge on complete Test cycle including Smoke, Sanity, Re-Testing, Functional, Regression, System Testing, Ad-hoc testing and System integration testing.
- Good knowledge in DB testing having experience in writing SQL queries.
- Hands on experience using test management tool- JIRA.
- Work experience into Agile environment and participated into Sprint activities
- Actively participated into Team meeting and Town hall meetings
- Having good understanding and analytical skills for problem solving
- Flexibility to work with new technologies and new domains
- Experience in Preparing Daily status reports, Weekly status report and Test summary reports.
- Ability to work under deadlines, worked as an active team member and willingness to accept responsibilities.

Project Summary

Project #1
Project Name   **: The Children Place**
Client   **: The Children Place Inc.**
Tools   **: POSTMAN and JIRA**
Technologies   **: JAVA and REST**
Others   **: API, REST, SQL, Agile and JSON**

Project Description:
> The Children's Place Inc.is a specialty retailer of children's apparel and accessories headquartered in New Jersey, US. It also markets apparel under the Children's Place, Baby Place, and Gymboree brand names. The Children Place is online retail application, this application main concept is selling the items to end user, registering the new items into the application. This application have two steams are there one is In-Bound steam and another one is Out-Bound steam.

Roles and Responsibilities:
- Preparation of status reports and other reports Reviewed and analyzed Functional Specifications provided by Business Analyst.
- Understand and Analyze the User stories and design the Test cases as per customer need
- Run The Test cases into JIRA cycle summary and create the Test reports
- Logging the Bugs and closed the same in JIRA
- Participate into planning, Daily scrum, Review and Retro calls
- Good experience into API Testing with SOAP UI tool
- Validate the response with SOAP UI assertions
- Good experience to handle] the Properties and Property Transfer
- Experience to run the APIs with POSTMAN and validate the same with snippets
- Preparation of reports and submit to the customer as per sprint wise
- Good experience and involved into the each phase of the SDLC and STLC
- Exposure into the JIRA workflow and Bug Life Cycle process
- Good command on Newman for postman reports
- Involved into review meetings for finalize the scenarios and cases
- Perform the Sanity, Smoke, Re-Testing and Regression Testing, exploratory and Adhoc Testing
- Involved into the sprint demo meetings and other QA calls

Project #2
Project Name : GCG
Client : GILL CAPITAL GROUP
Tools : POSTMAN and JIRA
Technologies : JAVA and REST
Others : API, REST, SQL, Agile and JSON

Project Description:
GCG was established in 2007 by seasoned entrepreneur J.S. Gill. It is a Singapore-based company which operates a group of brands and businesses with world-class credentials. Building on more than three decades of experience in the Southeast Asian and Middle Eastern markets, Gill Capital cherry-picks the best of global brands and creates innovative retail concepts to give its customers exactly what they want. Sometimes, before they even know they want it. What the World Wants Next - this springs to mind when describing the ever-expanding constellation of Gill Capital's stellar brands.

Roles and Responsibilities:

- Going through the software requirements and get clarifications on one's doubts
- Become familiar with the software under test and any other software related to it
- Understanding of the Test plan and RTM.
- Involvement in Preparation of Test Procedures, Test Scenarios, Cases and Test Data.
- Responsible for GUI and Functional Testing, using Black box Testing Techniques.
- Involvement in Test Execution, Results Analyzing and Defect Reporting.
- Involvement in solving Environmental problems along with Technical Support People.
- Preparation of weekly and monthly status reports.
- Experience to test the APIs using POSTMAN tool
- Good use of POSTMAN collections for save the APIs, Share the APIs and Export the same
- Exposure of POSTMAN collections – Local, Global and Environment
- Validate the data from database with SQL queries
- Good Analysis of User Stories and Design the Test scenarios and Test Case and Review the same
- Good knowledge on API chaining using POSTMAN with Snippets
- Hands on experience to perform different Testing like Smoke, Sanity, Re-Testing and Regression Testing
- Good understanding on URI , HTTP Methods , HTTP Status codes and JSON
- Hands on experience to use Headers for Authorization
- Experienced to validate Response JSON data using Snippets and JSON path evaluator
- Logged the defects in JIRA tool and closed the same
- Participated in Sprint calumnious : Sprint Planning, Daily, Bug Triage, Sprint review and Retro calls
- Connect with Dev. team for Sync-up for Analysis and tracking

Project #3
Project Name : WebMD
Client : WebMD
Tools : POSTMAN and JIRA
Technologies : JAVA and REST
Others : API, REST, SQL, Agile and JSON

Project Description: WebMD is best known as a health information services website, which publishes content regarding health and health care topics, including a symptom checklist, pharmacy information, drugs information, and blogs of physicians with specific topics, and provides a place to store personal medical information. URAC, the Utilization Review Accreditation Commission, has accredited WebMD's operations continuously since 2001 regarding everything from proper disclosures and health content to security and privacy. WebMD began investing in changes to

its site in order to entice users who use its site seeking specific information to linger on the site reviewing other material.

Roles and Responsibilities:

- Developed and executed Test Cases as per system requirements.
- Analyzing the Use case documents for the preparation of Test cases.
- Understanding the requirements of different user stories in various releases and analyzing them to find out Functionality and test scenarios.
- Understand API requirements Specify the API output status
- Organize API endpoints
- Sending Daily status reports to the Stake Holders
- Coordinate directly with client and development team to get clear understanding on the requirements.
