Summary

8 years of experience as a software developer with expertise knowledge of web applications. Extensive experience in the open source technologies and applications of ASP.Net, C#, JavaScript, AngularJS, Angular, React.js, Bootstrap, AJAX, JQuery, JSON, Node.JS, XML, CSS 2/3, DOM, Web Pack, Responsive designing Worked with Functional Programming, Object Oriented programming and other paradigms with Java, .Net and Javascript - ES5/ES6.

Built applications using React JS with ES6 which allowed us to render pages on both the client and server using the same codebase, developed web and mobile applications using ES6 features and frameworks such as React and Redux.

Customized the Node.JS server to pick the local Package and run the application without changing the local paths and variables.

Expertise in using Angular Directives, Controllers, Filters, Services, Templates, Events and Injectors.

Expertise in SQL Databases like Oracle, MySQL & NoSQL Databases like Mongo DB

Used Version Control tools like SVN, GIT, TFS

Used Fiddler, Postman, and other Rest clients to test the functionality of web-services

Experience

Development Team Lead

WalkingTree Technologies

Mar 2022 - Present (9 months +)

Implemented responsive web application using Angular 12

Implemented framework for unit tests for the application

Made use of angular life cycle hooks and events to handle page level events

Made use of subscriptions and services for communication across the application

Made use of ngRx for state management

Integrated subJx library to all for drag and resize functionality on DOM elements

Senior Software Developer Team Lead

The Home Depot

Jun 2021 - Mar 2022 (10 months)

Implemented UI mobile application for Order Fulfillment

Consuming micro-services written in JAVA

Converted wireframes into full-fledged Single Page Applications using Angular 11 with a Test Driven Development Approach

Helped to deploy applications on cloud services

Interacted with the business users to better understand the business requirements that the software application is intended to meet

Identified gaps in the requirements and wireframes to cover all the use cases possible

Provided support to help deal with any productions related bugs and issues

Senior Software Developer Team Lead

Pactera EDGE

Sep 2020 - Jun 2021 (10 months)

Designed and implemented 3 software solutions for applications from scratch

Implemented database design in Azure SQL

Converted wireframes into full-fledged Single Page Applications using modern development frameworks like Angular and ReactJS

Designed and implemented micro services by developing NodeJS servers

Helped to deploy applications on cloud services

Interacted with the business users to better understand the business requirements that the software application is intended to meet

Identified gaps in the requirements and wireframes to cover all the use cases possible

Provided support to help deal with any productions related bugs and issues

Senior Software Developer

United Airlines

Apr 2019 - Sep 2020 (1 year 6 months)

Developed UI using Angular for SPA

Used React concepts like JSX, components, states and props

Used Redux for state management

Consumed services using REST API calls. Implemented database for a new application in SQL

Implemented queries and procedures for data fetching, saving and modifying data.

Use UI technologies like jQuery & Node JS to achieve full fledge end to end application development

Integrated frontend and backend using REST communication

Extensively used Git for version control

Implemented database for a new application in SQL

Integrated frontend and backend using REST communication

Extensively used Git for version control

Software Developer

Bunge

Sep 2018 - Mar 2019 (7 months)

Developed UI using Angular 6 for SPA

Development of application components using Angular

Used Node JS, Angular and MVC Frameworks in the development of the web applications

Created custom directives to meet requirements

Developed separate css style sheets for individual components

Used GIT for version management

Used React flux to polish the data and for single directional flow

Utilized Karma and Jasmine for automated test

GIT is used for version control

Software Developer

EnCriss Technologies

Nov 2017 - Aug 2018 (10 months)

Used SASS to implement global style sheets

Implemented version management using GIT
Performed client side validations using JavaScript and JQuery
Used AWS BeanStalk to host the application
Worked with project manager, Developers, QA engineers to see projects through full development life cycles
Used React JS with Redux to separate data and presentation layer. Utilized Redux stores to handle states
Created Mongo DB database schema design and retrieve data from database using Mongoose drivers

Software Developer

TEOCO

Jun 2017 - Aug 2017 (3 months)

Involved in SDLC and implemented project in SCRUM environment
Used angular 2 factory and services for dependency injection
Used custom directives for reusable components
Scheduled procedures for load balancing.
Create web pages based on wireframes
Worked in Node JS and express JS to enable communication between server and client through REST API's
Designed and hand coded Angular app for single paged application, Used REST for backend API communication
Extensively used Git for version controlling and regularly pushed the code to GitHub

Software Developer

NTT DATA Services

Jul 2014 - Aug 2016 (2 years 2 months)

Build prototypes using HTML5, CSS3 and Bootstrap
Developed interactive SPA using AngularJS
Used AngularJS controllers, filters and services to add functionality
Implemented REST based services to facilitate communication between clients and servers
Used SASS to implement stylesheets
Used TFS for version management.
Developed Responsive Webpages using Angular JS, Typescript, JavaScript, HTML5, Bootstrap and RxJS
Components, Two-way data binding, Interpolation, Directives, Services and Dependency Injection.
Implemented application's authentication & authorization, navigation using Angular Routing
Fetched out stats/logs from Unix servers. Created & Executed SQL Queries to fetch reports from database.

Education

University of Florida

Master's degree, Information Technology
2016 - 2018

Jaypee University of Information Technology

Bachelor's degree, Computer Science
