- Worked in Accenture as a SSE from 28st Feb 2019 to 9th June 2021.
- Working in Accolite Digital India Pvt. Ltd as a SSE from 23rd June 2021 to till date.

Projects Exposure:

1. Virgin Media

Role: SSE

Description: Virgin Media is a large telecom industry in the UK, who provides Telephone, Television and Internet services. I am working here as a SSE, responsible for developing new pages or modifying existing pages as per the requirement from business or regulatory. Virgin Media is a bundle of almost 12 micro applications and I worked on around 6 apps as a developer. We are using a storybook for developing common components which are going to be used in all the micro applications. Also using Facade for state management which helps to reduce API calls and increase the performance of applications.

Environment: Angular 14, HTML5, CSS, Typescript, Storybook, Facade.

2. RAID

Role: SSE

Description: RAID is an acronym of Risk, Action, Issue and Decision. It's an interactive, graphical summary of the RAID and Actions to be taken for the growth and development of Projects. This tool is useful to enhance the overall performance of the specified project. Basically, it's a logging tool like

TFS/ADT Jira and useful for logging Risks, Issue in applications and reflecting them in TFS or Jira tools. And also, we are able to edit or delete records created in tools. The record will be added with Title, State, Severity, Probability, Proximity, Teams, identified by, Assigned/Assignee, various types of dates. All this data is also shown graphically with the help of D3 Graphs.

Environment: Angular 8, Bootstrap, .net.

3. Allianz Insurance Portal (Client: Allianz)

Role: Software Developer

Description: It's an Insurance domain project. It is a Car Insurance application that generates policy documents based on car and user's information. It has three major modules like user interface, user dashboard and call center search page. User interface is the main module that takes the information about the car and the user and also has many payment modes such as credit card, debit card or pay by bank. After successful payment users can view their policy document on the dashboard. If a user faces some difficulty to complete their quotation, a call center person can help to complete it.

Environment: Angular 4, Angular Material Design, Maven, Java.

4. Humano Care

Role: Front End Developer

Description: This application is useful for clinics/Hospitals. This application contains 17 modules like Doctor/Hospital, Patient, Pharmacy, Ayurveda, Spa, Insurance, Ambulance, blood Bank etc.

- **Doctor/Hospital Module:** In this module a doctor can register on this application and create his own hospital. Admin is able to create users like receptionists, accountants and consultants. Every user gets their own credentials for login and will redirect to their dashboard after successful login. Schedule consultants regularly/weekly visit at his clinic for consultation. Every user has their own credentials to login and have different accessibilities of the menu and submenu which are assigned by admin. He is able to add his availability in his clinic or other clinics where he visits regularly/weekly as a consultant. Able to register patients and schedule an appointment. Also able to refer patients to another doctor for consultation. Doctor can store his/her schedule and events properly. Patient's bill details maintained in which total bills of particular patient n that pending bills, paid amounts of bills and pending bills, paid type such as cash/online or through cheque etc. Admin is able to see account activities like collection, expenses. Various kinds of reports are provided like total appointments, total collection through calculation and graphs.
- **Patient Module:** In this module patients are individually able to register on this site. After registration he will get his own credentials for login after verification of OTP. Then he/she

will be able to schedule his appointment as per the doctor's availability. He/she is able to maintain whole medical records like BP, blood glucose, family history, heart rate, height, weight, BMI of the whole family. Also provided a chat and messaging facility to communicate with doctors when they required it.

Environment: Angular JS 1.x, Angular 4.0/5.0, JavaScript, Angular Material Design, Bootstrap, CSS.

5. Billing & Stock Management

Role: Software Developer

Description: This is an Online ERP product for small as well as large industries which is customizable as per the business requirement. This includes various types of modules like

- **Inventory Module:**In This module we can maintain the record of invoices, purchased stock, sold stock, remaining stock, and warehouse management. It gives an indicator for which stock hit their threshold value. Various types of reports are generated like monthly sale, purchase, income or daily reports also.
- **HR Module:**In This module we are able to maintain all the records of staff such as employee details, salary structure, attendance sheet, leaves management etc.
