- Experience in creating Reports and Dashboards as per business requirements.
- Good knowledge and understanding of Salesforce Sharing and Security Model.
- Having knowledge about Integration.

ACADEMIC BACKGROUND

Bachelor Of Engineering	2017
Diploma In Engineering	2014

PROJECTS

Web Survey: - Create an app to generate unique survey links for every customer. Create a website for hosting a survey link survey and use the lightning web component to create a different survey. A survey like enquiry, contract/booking delivery, etc. The survey was used for capturing ratings and feedback on services across different stages. When customers open the unique survey link web page navigate to the survey page and give a response given by the customer store in the salesforce custom object and send it to the client database through integration.

Canteen Management: - This Management system works to automate the existing manual system with the help of advanced computerized software. The project is about taking orders of food from customers with their verification details and then admin processing it for food delivery to customers. The main objective of the project is to reduce administrative work, save time, provide fast and efficient service, and increase customer satisfaction.
