PROJECTS

- **Projects 1: PRS**

Client: Confidential

Brief: We build a property rental system Application using out-of-the-box features of Salesforce, Apex and Visualforce. This property rental system application will communicate with third party Service using REST web services.

Duration: 6 Months

Role & Responsibilities:

- Analyze client's business requirements and processes through document analysis.
- Developed various Custom Objects, Tabs, validation rules and Visual Force Pages.
- Integrate Salesforce application with external applications.
- Create your own custom application using APEX, Visualforce and out-of-the-box features of Salesforce.
- Learn about custom settings
- Create controller extension, Trigger, Apex Class, Restful web services, Custom Setting and Remote Site Settings.

- **Projects 2: IES**

Client: Confidential

Brief: An IES stands for integrated eligibility system which is the USA government project. In that they are providing different services to the Rhode Island state citizens, as part of the services they provide different insurance plan to the citizens like SNAP, CCAP, RIW, Medicate, Medicare, QHP. This is an intranet project so nobody can access it directly. the government provides DHS offices to different locations, so the person who want to take the benefits of services should visit to nearest DHS office and provide required document to them for particular plan they wish to apply. the government employee which is our client called as case worker, case worker collects citizen documents and check the person who applied is eligible for that plan or not. If person is eligible then they send the benefits of the plan to the person bank account if not then they suspended the request of the person.

Duration: April 2021 to till.

Role & Responsibilities:

- Developed various Custom Objects, Tabs, validation rules and Visual Force Pages.
- Created page layouts, search layouts to organize fields, custom links, related lists and other
- Used SOQL with in Governor Limits for data manipulation needs of the application using Force.com Explorer.
- Created profiles and implemented Object and field level security to hide critical information on the profile users.
