PROJECTS

1. *Banking Payment Application*

Project Description:

It is a middleware Server-side business component of bank web application. This application is responsible for processing the payments done by the customers through java-based web services. When a customer initiates a transaction, the application performs various business logics and invokes different systems for multiple purposes like fetching account details, sending alerts etc. and finally returns the payment status to the user.

Client Name : Banking client

Role : Senior Systems Engineer.

Duration : Current Project.

Tools used : Eclipse IDE, SQL Developer, Perforce, SoapUI, Postman, Jira.

Roles and Responsibilities:

- Design and Development of the Web Services.
- Coding and testing Project specific functions and generic functions.
- Gathering requirements and writing requirement-based code as per the specific standards.
- Defect analysing and fixing.
- Conducting code reviews.
- Mentoring new team members, by providing bootcamps for understanding various frameworks used in the application.

2. *Conference Room Booking Portal*

Project Description:

It is a web-based application, which provides content by logging into one place and with one set of login credentials for users. It is a page where the users will be able to book conference room for daily scrum meetings. This allows the them to book the conference room prior the meeting in order to avoid the shuffling with other teams.

Client Name : Internal project.

Role : Developer.

Duration : 2 months.

Tools used : Eclipse IDE, SQL Developer, Postman.

Roles and Responsibilities:

- Worked as Java developer.
- Understanding the requirements given and developed the web application based on the design with prescribed quality, standards and timeline.
- Communicating with the team members in requirement gathering and understanding.

- Timely report of module development, issues and possible risk factors.

3. *Ekart Web Application*

Project Description:

Ekart is an e-commerce web-based application which allows the seller and buyer to sell or buy their diverse product on this well-known marketplace, respectively. This website allows the buyer to compare the features of different products under the same category. It also includes an additional feature where the buyer can exchange the product which are made available by the seller in this website.

Client Name : Internal project.

Role : Developer.

Duration : 1 month.

Tools used : Eclipse IDE and Postman.

Roles and Responsibilities:

- Analysing the functional business requirements.
