

UPENDER K
Software Engineer - II

Mobile: 9705096609
Mail: upender6609@gmail.com

PROFILE SUMMARY

- Highly-skilled software development professional bringing in **5+ years** in Web&Hybrid Mobile application development. Very good knowledge in **Angular 2, 4, 5, 6, 7, 8**, Node.Js, Ionic and Ionic-2,3,4 frameworks with Cordova Seed Projects.
- Very good experience in JavaScript, express and Angular-2,4,5,6,7,8.
- Worked on Developing and creating Angular Web Applications and hybrid mobile applications.
- Worked on Developing Hybrid Mobile Applications using Ionic framework
- Good knowledge in Development and securing REST API using NodeJs.
- Worked on jasmine and karma for unit testing.
- Worked on accessibility insights
- Worked on Google Cloud Messaging(GCM) and Apple Push Notification Services(APNS) used NodeJs and Socket.io to send push notifications
- Worked on Rasa NLU and Botkit to create chatbot.
- Worked on Oracle intelligent bots.
- Qualitative experience in programming and debugging.
- Good knowledge on Continuous integration and automated deployment using Jenkins.

WORK EXPERIENCE

- Working for **AGS Infotech Ltd** as a **Fullstack Developer** from **Jan-2017** to **Till Date**

EDUCATION DETAILS

- **B.Sc – MCCS -63% (2009-13) – KMDC- Kakatiya university**

PROFESSIONAL EXPERIENCE

Company/Project Name: Etex Group
Period: Nov 2020 - Present
Role: UI Developer

Tools/Technologies Used: API Gateway, OAS 2(Swagger), Angular8, Angular Material, Angular Material, accessibility insights, NodeJS, Express, sql, MySQL, EC2, Load Balancer, RDS, Cloud Front, S3, Git, Bamboo, Mocha, Supertest, Jasmine, Karma, Chai

Description:

Etex Group Installer and distributor of insulation and building material products for residential, commercial and home owners. Handle every stage of the installation process, including material procurement, scheduling and logistics, multiphase professional installation and quality assurance. This project focuses on upgrading and modernizing Etex quoting and order management applications to open-source technologies entries.

Responsibilities:

- Architecture design for UI.
- Requirement analysis and estimations.
- Involved in end to end development
- Implemented unit testcases in UI
- Involved in front-end user interfaces
- Used Angular, Angular Material and bootstrap for developing UI.
- Used S3 behind cloud front to host UI.
- Used bamboo to deploy UI to S3 bucket.

Project/Client: Gordon

Period: Jan 2017 – Oct 2020

Role: UI Developer

Tools/Technologies Used: API Gateway, OAS 2(Swagger), Angular6, Angular Material, Angular Material, accessibility insights, NodeJS, Express, sqel, MySql, EC2, Load Balancer, RDS, Cloud Front, S3, Git, Bamboo, Mocha, Supertest, Jasmine, Karma, Chai

Description:

Gordon Food Service Inc is on a mission to standardize and gain deeper insights on its private fleets moves coordinated by its centralized logistics division regarding cost and revenue metrics.

application eliminates the manual backhaul spreadsheet by providing a web-based application to submit backhaul costs, automate the Journal Entry / GL process to feed into PeopleSoft to product Profit/Loss and Eliminate need to copy/paste shipment PO data from 1050 report ability to filter and apply data within system. This is an Angular UI based application connected to MySQL RDS through Node API's deployed in AWS cloud & also integrates with Snowflake to periodically pull/push data thru Lambda's & integrate with on-prem PeopleSoft to post the journal entries.

Responsibilities:

- Architecture design for UI.
- Requirement analysis and estimations.
- Involved in end to end development
- Implemented unit testcases in UI
- Involved in front-end user interfaces
- Used Angular, Angular Material and bootstrap for developing UI.
- Used S3 behind cloud front to host UI.
