PROFESSIONAL EXPERIENCE:

- Led a team of developers in the design, development, and implementation of custom Salesforce solutions utilizing Apex, LWC, and other technologies.
- Spearheaded the architecture and design of scalable and maintainable Salesforce applications, ensuring adherence to best practices and coding standards.
- Collaborated with stakeholders to gather requirements, define project scope, and deliver solutions that meet business objectives on time and within budget.
- Conducted code reviews, provided technical guidance, and mentored team members to enhance their skills and productivity.
- Successfully delivered multiple projects, including [mention specific projects or achievements], resulting in increased efficiency and user satisfaction.

PROJECTS DESCRIPTION:

Project 1:- Salesforce custom opportunity view

Create a custom view for sales reps including a custom table with custom calculations and weekly email notifications, using batch class, flows, and salesforce lightning.

Custom view also includes custom listviews and app management based on the stale deals, this project asked to minimize the stale deals in the pipeline, and the view has functionality to update deals' custom fields and notifications as well, the view was also available on the mobile, so user can easily access the deals and do operations on the mobile as well as desktop.

Project 2:- Conversation logs

All users to log the conversation on the form where users can select the detail as per the conversation with a client

Responsibilities:

- Requirement Analysis and User Story Implementation
- Migrating existing processes to Lightning using Lightning Experience configuration and Custom Lightning component implementations.
- Developing Apex Triggers (Using Trigger Framework and Best Practices), Apex Classes, Custom Controller, Extensions
- Unit Testing, Test coverage using best practices.
- Lightning App Builder to build a simple one-page app.
- Developed Lightning Web Components (LWC).

Project 3 :- Partner Tagging(add the partner for each OLI lable)

Responsibilities:

- Requirement Analysis and User Story Implementation
- Migrating existing processes to Lightning using Lightning Experience configuration and Custom Lightning component implementations.
- Developing Apex Triggers (Using Trigger Framework and Best Practices), Apex Classes, Custom Controller, Extensions
- Unit Testing, Test coverage using best practices.
- Lightning App Builder to build a simple one-page app.
- Developed Lightning Web Components (LWC).
- Developed Aura Lightning Components and App
- Created Custom Permissions set to assign users based on user license in SFDC
- Created Custom Validation Rule.
- Created Flow to Send Email on Record Update.
- Used Custom Tabs and Custom Labels.
- Creating Apex class and related test classes.
- Worked on Salesforce IO to provide the best of possibilities to meet the business requirements.
- Apex trigger to update records to the case
- Used Approval Process to send Email alerts through Custom Email Templates
- Tested the functionality using different test cases with different scenarios
- Working using Agile Methodologies.
- Analysis of business requirements and preparing requirement design document

Project 4:- Automation Process

Responsibilities:

- Requirement Analysis and User Story Implementation
- Migrating existing processes to Lightning using Lightning Experience configuration and Custom Lightning component implementations.
- Developing Apex Triggers (Using Trigger Framework and Best Practices), Apex Classes, Custom Controller, Extensions
- Unit Testing, Test coverage using best practices.
- Lightning App Builder to build a simple one-page app.
- Developed Lightning Web Components (LWC).
- Developed Aura Lightning Components and App
- Created Custom Permissions set to assign user based on user license in SFDC
- Created Custom Validation Rule.
- Created Flow to Send Email on Record Update.
- Used Custom Tabs and Custom Labels.
- Creating Apex class and related test classes.
- Worked on Salesforce IO to provide the best of possibilities so as to meet the business requirements.
- Apex trigger to update records to the case

- Used Approval Process to send Email alerts through Custom Email Templates
- Tested the functionality using different test cases with different scenarios
- Working using Agile Methodologies.
- Analysis of business requirements and preparing requirement design document

Project 5:- WLR Phase1 (Fill the win-loss survey before the opportunity moves to the close won stage)

- Requirement Analysis and User Story Implementation
- Migrating existing processes to Lightning using Lightning Experience configuration and Custom Lightning component implementations.
- Developing Apex Triggers (Using Trigger Framework and Best Practices), Apex Classes, Custom Controller, Extensions
- Unit Testing, Test coverage using best practices.
- Lightning App Builder to build a simple one-page app.
- Developed Lightning Web Components (LWC).
- Developed Aura Lightning Components and App
- Created Custom Permissions set to assign user based on user license in SFDC
- Created Custom Validation Rule.
- Created Flow to Send Email on Record Update.
- Used Custom Tabs and Custom Labels.
- Creating Apex class and related test classes.

Education

2014	MBA	M.D University, Rohtak
2010	BCA	C.C.S University, Meerut
2007	Sen Secondary	B.K.S.V.M Inter College, Bijnor UP
2006	Secondary	B.K.S.V.M Inter College, Bijnor UP
