#### Apr 2016 - May 2018 Software Engineer

### Signal Search Software India Pvt. Ltd

Project Details: SAT Automation (ERP) June 2017-May 2018 Project Description: The Staging Automation Tool (SAT) is a Stand-Alone, centralized tool that will allow you to execute Packaging, PDB and DPK creation processes on the same program without switching to other applications for script executions, log review, file copy, etc. It was developed using Java, People Code, C++, Visual .NET, Linux scripting, DOS shell scripting and Java scripts. It requires entering theencrypted login credentials once on EMC-SAT page, after that the encrypted credentials are taken from the text file for the rest of SAT???s execution. Product HR. FSCM, HR91. HCM, oracle fusion It works on an AUTOMATED step-by-step execution mode, this means that you can run the entire PACKAGE, PDB and DPK Creation processes step-by-step, or run all of them without human interaction using predefined & editable TEMPLATES. SAT is a program that runs in the background, which is waiting for a TRIGGER file, which will contain the environment details, then will run a series of steps, predefined in an ORDER file. Based on the outputs of each step it will email to interested parties and continue, stop, or abort. Thanks to SAT???s new modular architecture, we can add new complex steps without changing the core SAT version. We just need to create a new BATCH file with the needed commands, and call it from Order FileRoles and Responsibilities: Responsible for complete module testing and verify them using cucumber framework Prepared test plan for modules and business understanding documents Prepared and executed test scenarios and test cases Prioritize testing activities Analyzed/Reviewed test cases prepared by other team members Reported errors in bug tracking tool (ALM) and tracked issues to closure including support of defect investigation, validate defect fixes, and analyze impact of fixes Prepared suggestion documents to improve the quality of the application Carry out regression testing every time when changes are made to the code to fix defects. Performed Sanity testing on patches delivered by Misys Conducted training sessions for team members Participated in SIT testing for major project efforts in consecutive efforts from R2.17 to R1.18 Involved in Write a Test case of as per the Requirements. Run the automated step on sat tools and review the logs. Writing the order file according to the project plane Running the weakly template for database.
