CERTIFICATIONS

- ✓ Salesforce Certified Platform Developer 1
- ✓ Certified 201 Apttus CPQ

EDUCATION

- ✓ B.E. in Information Science, 2019
Vishwesvaraya Technological University, Karnataka – 8.06 CGPA

WORK EXPERIENCE – 2.5 years

Wipro Technologies

(2.5 years) 3 June 2019 – present, Project Engineer

Project 1: Client: Philips Healthcare

Role: Developer – Salesforce platform & Apttus CPQ

Description: Philips Healthcare is a technology company that offer consumer electronic products, Medical systems/ Equipment's. For the complete Quote to Cash process they use Apttus CPQ on Salesforce. The team to which I belong (Eagles) handles Orders on Quote and Pricing Data on Xauthor report (Precalc). The project works on Agile Methodology.

Responsibilities:

- ✓ Requirement Analysis and Interpretations of User Stories.
- ✓ Estimating the efforts and complexity of User Stories coming up in Sprint Planning.
- ✓ Implementation of User Stories using Apttus Customization or Apex Coding.
- ✓ Deployment of code from Sandbox to higher Orgs using VSCode.
- ✓ Unit Testing the Code and maintaining 80% Test coverage on Apex classes.
- ✓ Interacting and coordinating with the team for any technical and functional update/change and solving queries that may arise.

Project 2: Client: Charles River Laboratories

Role: Developer – Salesforce platform & Apttus CPQ

Description: CRL is a company which provides research tools & support services for drug discovery & development. This project was starting from scratch and they wanted to use Salesforce and Apttus CPQ to build a process for selling their test methods based on different attributes their customer wish to add.

Responsibilities:

- ✓ Interaction with Client for Interpretation of User Stories.
- ✓ Product creation using Apttus CPQ Admin (Bundles, Sub bundle configurations)
- ✓ Attribute Creation and creating Attribute Rules as they were having multiple attributes driven prices on cart page.

INTERNSHIP – 7 months

SANKEY SOLUTIONS

5 months (Jan 2019 – May 2019), Solution Analyst.

Project 1: Client: Zinier Technologies

Role: Developer – JSON Objects Custom Platform

Description: Zinier is a company that provides Field Service Management Applications, which helps in Automation of Field Services. This Platform is a Low-code JSON objects development which automates the web and mobile application.

Responsibilities:

- ✓ Interact with Clients and Prepare MOM for Requirement Analysis and Gathering.
- ✓ Implementation of the Requirements using JSON.
- ✓ Application JIRA for Defect management and testing tool.

BINARY BRIDGE

2 months (June 2018 – July 2018), Junior Software Developer.

Project: Quiz Portal

Role: Developer – Php, SQL

Description: Designed and Developed Quiz Portal of Questions & Answers Pattern along with Login/Registration. This Portal also Analyses the winners based on the highest marks.
