OBJECTIVE

To be an active employee in the company to secure a position and to express and develop my skills for the mutual development of my company and myself.

PROJECT EXPERIENCE:

Software Developer

Bizruntime IT product & Services, ReactiveWorks IT Solutions Pvt. Ltd.: 2016-2019

PROJECT : #1

Client : GetUsROI

Project : Form Flow Engine

Role : Full Stack Developer

Year : 2016-2017

Description of the Project: Separate the concept of 'form flow' from the forms themselves, such that the flow can be modified independent of the form, and the same form can be re-used in multiple places in a flow

Include a concept of 'mapping' such that data can be mapped from an external context before being supplied to a form, and afterwards unmapped back from the form into the external context

Allow the forms, flow and mapping to be modified without requiring recompilation or services of a developer.

PROJECT : #2

Platform : SAAS Platform

Client : Key2Act, New Berlin, US

Project : ACT

Role : Java Developer

Year : 2017-2019

Description of the Project: Act is a communications engine designed to integrate events between sources by automating service requests and highlighting necessary actions. Act connects to every non-telephone event. Act also communicates to any business management solution and is the universal connector for our industry.

With Act's [Service Request Manager](#), you can accept or reject service requests. Once a service request has been accepted, you can create a service call directly in Act and then manage that service call in Service Management.

Sr. Consultant

Allstate Solution Pvt. ltd . : 2019-Current

PROJECT : #3

Org : Allstate

Project : Squaretrade

Role : Java Developer

Year : 2019-Current

Description of the Project: Squaretrade is a top rated warranty-services provider for electronics and appliances, servicing 100M customers. An Insurance company (250 employees), acquired by All State in Jan 2017 for \$1.4B.

Led key development initiatives for SquareTrade's channel partner integrations (several 50MM+ accounts such as Target, Media markt, Costco, Telenor), home depot applications, and build microservice applications.

Worked on some pricing where we used to perform some legacy approaches to keep the data in data base records as a Source of data while we create warranty

Later on migrated legacy system to well organised microservice architecture.

Defined and executed the vision and development roadmap for customer retention and additional revenue generation opportunities in direct-to-consumer segments Teamed cross-functionally to pivot the product to a subscription model and part of creating warranties for various merchants.

Part of engineering team to build out a highly available and scalable system to support platform integration, which has since been used as an engine for growth for retail partners

TECHNICAL PROFICIENCY

- Core Java
- Spring Boot
- Spring Cloud
- MicroServices
- Spring JPA
- Spring Core
- SQL
- Kafka
- Junit Testing,Mockito
- Maven,Gradle, GIT

EDUCATION

Electrical and Electroincs Engineering 2010-2014
