1+ years' experience in the software development, I have played a leading role in full product lifecycles. I work well in a team and have found it rewarding leading the team. I focused on applications design and development, and to develop this expertise I have extended my knowledge and skills in several supporting areas.

SKILL SET:

Language	C++/C++11, VC++, MFC, c#
Operating System	Windows
Scripting & Debugging Tools	Java Scripting, Python, Shell Scripting, GDB, WinDbg
Database	MS SQL Server
Version Control	Clear Case, Git
BugTracking/Req. Mgmt. Tool	JIRA, RTC, ClearQuest

EDUCATIONAL QUALIFICATION:

Bachelor of Technology in Computer Science, from BBDU lucknow, in 2021.

EXPERIENCE SUMMARY:

- More than 1+ years of IT experience in development, maintenance and support.
- Effective in leading applications with end-to-end responsibilities.
- Experience in Object Oriented Analysis and Design (OOAD) and Object-Oriented Programming (OOP).
- Strong knowledge of industry standard methodologies like SDLC, Agile, Iterative Software Development Life Cycle Process as per Rational Unified Process (RUP), Testing Methodologies, bug life cycle.
- Expertise in software designing patterns.
- Experience in Core Java Development and C# development.
- Experience in Agile and Scrum methodologies.
- Experience in SQL Server database programming using SQL, PL/SQL, Stored Procedures, functions, triggers and other elements.
- Experience in creating UML diagrams, creating, maintaining and reviewing design documents.
- Experience in all phases of software development life cycle i.e. requirement gathering, requirement Analysis, design, defines test cases, development, unit test and maintenance.
- Capable of meeting tight deadlines with excellent overall project and thorough involvement in product development life cycle experience.
- Excellent analytical and communication skills (verbal and written).
- Excellent experience in coordinating and implementing the activities planned with the Onsite/Offshore development teams and delivering within the stipulated time frame.

Organization:

- eWebguru Pvt. Ltd: may' 2021 - Till now

Project 1: Rating System, known as FUSION, a proprietary application that operates on a Windows NT platform. Fusion UI has been developed in MFC, UIs are fetching the data from SQL Server database and presenting it to the users. Fusion receives EDI from the customer's production facility requesting parts in a designated order. The Parts Sequencing System takes the Just-In-Time part requirements and groups them by commodity in the most effective manner for picking and shipping the parts. The system is most used to sequence parts in build order to an assembly line.

Environment: C++, VC++, MFC

Responsibilities:

- Writing various design documents by using UML methodology (sequence diagrams, activity diagrams, class diagram).

- Requirement Analysis and functional specification preparation.
- Design and Develop new product components.
- Peer Code Reviews.
- Analysis of logs to identify the issues.
- Debugging the issues.
- Assist fellow team members technically. Train new members in the team.
