PROFESSIONAL EXPERIENCE

Valuates Reports

Title: Valuates_Stats

Role	: Senior Software Engineer
Duration	: OCTOBER 2019 – Till Date
Description	: Building Technology in Reports Selling Domain, Breaking Report into Statical Data points and showing these data points in a graph using google charts library. Building a platform where users can buy data points selectively. The Data points can be versioned so that new statistical data can be put on to the same data point and those users who buy the data points previously, can see only their purchased version until they buy a new version of the same data points.

Using Rest API Pulling the purchased data points and showing the charts in Augmented Reality using unity.

Responsibilities	: ✓ Design & Developing the complete System.
Environment & Tool:	: Java, Data structure, UNITY, VUFORIA SDK, Google Firebase, Datastore

Title: Valuates_Insight

Role : Software Development Engineer
Duration : FEB 2019 – JUL 2019
Description : Building Technology in Reports Selling Domain, matching Clients interest to the right content reports through Tagging systems & sending it through various channels like browser Notification, Email, SMS on Desired Frequency like weekly, Monthly, Quarterly.

Responsibilities :
✓ Design & Develop the complete System.

Environment & Tool: : Java, Data structure, Google Firebase, Datastore, Task Queue, Mailgun API

ACI Worldwide Inc

Title: CI_HUB (Central Infrastructure)

Role : Software Engineer
Duration : SEP 2017 – FEB 2018
Client : Malaysia
Description : This project results as an immediate Payment transfer in the entire Malaysia. We made one bank as a central bank just like RBI in India & all the other banks are connected to this central bank. A connector is installed in all the other bank premises only. Now due to the communication between HUB & Connector Immediate payment is possible.

Responsibilities :
✓ Worked on Bank Sign in, Sign off code so that particular bank availability was found & informed to all the other banks.
✓ Worked on Liquidity flow & settlement cut-over cycles.
✓ Worked on Reconciliation file generation.
✓ Worked on test cases & wrote groovy scripting.
✓ Coordinating with the team for completion of deliverable and resolution of issues encountered during configuration activities.

Environment & Tool: : Java, Linux server, ORACLE, XML parsing, Eclipse, UPF Payment Framework, Jira, putty, Tomcat.

Mindtree Limited

Title: Commercial Insurance Vehicle

Role : Software Engineer
Duration : Sep 2015 – MAR 2016
Client : MSIG Singapore.
Description : This project results in a Policy management product consisting of hierarchical objects like Marketable Product, Coverage Group, Coverages, Reference Object, along with the usage of Underwriting rules. It requires product configuration at the stand alone level based on the Underwriting Application Template which is again based on P & C Insurance Template. This product is designed to be referred for the FS-PRO training.

Responsibilities :

- ✓ Analysis of the project specifications provided by the client.
- ✓ Configuration of the objects at the different levels.
- ✓ Involved in Client Meetings and Updates.
- ✓ Configuration of Content Show/Hide, Validation, calculation and Rating rules in FS PRO by analyzing the requirement specs.
- ✓ Work on UI configuration in FS QUO.
- ✓ Coordinating with the team for completion of deliverable and resolution of issues encountered during configuration activities.

Environment & Tool: : Java, Eclipse, SAP FS-PRO, SAP FS-QUO
