- Azure Devops course
- Software Development Life Cycle (SDLC) course
- Internal Corporate Trainings

Project Details

1. Project Name: Ensure Insurance & Volante Global

Project Location: Nigeria, London

Designation: Salesforce Developer

Role: Development, design, testing, deployment. Client Communication

Description:

These are insurance projects. I have given analysis, customization and configuration support for these projects. I have to get the requirement directly from clients over Skype, Email or JIRA. Based on requirement I will design, develop and test then deliver the task. In this project some time I have train my juniors so like a virtual lead role.

Expertise:

Apex class, Triggers, Visual force pages, Aura, Sales cloud, Service Cloud, Community Cloud, Data Loader, Workbench, REST API, Automation tools (Flows, Process Builder, workflows, Approval Process), Future, Batch and Schedule classes, SOQL, JSON, HTML, CSS, JavaScript

2. Project Name: DAMAC

Project Location: Dubai

Designation: Senior Salesforce Developer

Role: Development, design, testing, deployment, Client Communication

Description:

This is real estate domain project. I have given analysis, customization and configuration support for these projects. I have to get the requirement directly from clients over teams, Email or JIRA. Based on requirement I will design, develop and test then deliver the task. In this project we are two members from offshore. I've been working under the lead. So, it's giving different experience.

Expertise:

Apex class, Triggers, Visual force pages, Service Cloud, Data Loader, Workbench, REST API, Automation tools (Flows, Process Builder, workflows, Approval Process), Future, Batch and Schedule classes, SOQL

3. Project Name: ID Systems

Project Location: US

Designation: Senior Salesforce Developer

Role: Development, design, testing, deployment, Client Communication

Description:

This is wireless device management Project. I have given analysis, customization and configuration support for these projects. I have to get the requirement directly from clients over teams, Email or JIRA. Based on requirement I will design, develop and test then deliver the task. In this project we are three members from offshore but we will work different shifts; mine is morning shift. We will work different areas but some time we will work same areas. So same task working with different shift its little complicated to maintain the version of changes. It will happen rarely so we don't have any version control software instead we will use commenting inside the class to find the changes of other developers.

Expertise:

Apex class, Triggers, Visual force pages, Sales Cloud, Service Cloud, Data Loader, Workbench, Automation tools (Flows, Process Builder, workflows, Approval Process), Future, Batch and Schedule classes, SOQL, FinServ Financial Package, Price Book, Quote

4. Project Name: ResLife Insurance

Project Location: Australia

Designation: Senior Salesforce Developer

Role: Development, design, testing, Client Communication

Description:

This is insurance domain Project. I have given analysis, customization and configuration support for these projects. I have to get the requirement directly from clients over teams, Email or JIRA. Based on requirement I will design, develop and test then deliver the task. In this project I am solo developer along with one devOps deliver engineer from offshore. This project in BAU stage mostly my duties are bug fixing and analysis rarely will get enhancements. All the deployment will happen through branches its done by devOps engineer.

Expertise:

Apex class, Triggers, Visual force pages, Sales Cloud, Service Cloud, Data Loader, Workbench, Automation tools (Flows, Process Builder, workflows, Approval Process), Future, Batch and Schedule classes, SOQL, FinServ Financial Package, VSCode
