Projects

Smart Implementation Suite

- This project is a web based system, which has motive to run portal website for a central repository admin to create various solution assets as well as child portals for different department users.

- Has a motive to give different portal to different department. So they can use the portal to manage different assets which gives solution to the various aspect in there department and helps to document the departmental works in a company.
- Worked on the user management, creation of solution assets, add/edit/version creation of assets, dashboard for central admin and child sites, POCs on JqPlot Graphs.

CFO Dashboard

- This project is a web based system, which has motive to run portal website to get a dashboard where all the invoice, net cash, amount receivable and payable will be shown based on role. Admin can create company and user, can give access to a role to do the same. It gets customer data from some ERP and Aggregators Like ERP, Plaid and Yodlee and present the consolidated data in the dashboard based on customer and company.
- Worked on user profile creation based on role, data scrub to copy company data to another company, some refactoring APIs, changes on existing APIs

dhi

- This product is web as well as mobile based system, which has motive to run portal website for colleges and institutes to offer facility to their students, faculties, hod's, principal and administration department to create & maintain their records and can be used to improve the overall performance of the institution.
- Used Programing capabilities in Spring boot, Java 8, Angular 7, HTML5, CSS, Bootstrap, Material Design and Mongo DB which is helping the product grow with a good performance.
- Worked on Admission, NBA (National Board of Accreditation) and Feedback module. Admission module is about student getting into the college with the payments which is managed by the accounts admins. It has pre-admission, online payment, fee tracking and issuing the certificates etc. NBA is about tracking the live data of college, giving a self-assessment with an auto calculated scores by the tool and reduces the paper work at the end term. Feedback Module is about collecting the feedback for faulty, infrastructure and college from the students with given configuration of anonymous or not. Feedback can be collected with various level such as course, faculty, section, semester, department and degree level.
- The product has several other modules such as Attendance, Leave Management System, Schedule, Course Management, Profile, Academic outcome, Placement, Examination and NAAC (National Assessment and Accreditation Council). Administration department uses this system to maintain records of admission, user management, course management and college details.
- This product helps students and faculties to keep track of their records and compare their performance with others and helps the principal and hod's to track statistics and performance for the overall institution as well as specific section of a department.

4dot5

- 4dot5 is a platform for Organizations to recruit candidates. Where a recruiter can contact their candidates, send assessment, and also compare candidate with

others also. This platform also calculates their score automatically by processing there resume once they are upload here.

- Used Programing capabilities in angular js, automation using protractor.
