Having ~6 years of experience with substantial knowledge in Automation and Manual testing for regression, functional, enhancement, support and upgrade projects.

- Implemented ARD in writing test cases
- Implemented automation tool Tosca
- ARD integration with Cucumber
- Data base testing
- Reports generation

WORK HISTORY

Application Development Senior Analyst

Accenture Pvt. Ltd. | Client: Workday

Project Description

Workday Recruiting is an end-to-end talent acquisition application built to help you find, share, engage, and select the best internal and external candidates for your organization.

Key Responsibilities

- Experience in EIB upload for various client implementations and tenant wise configuration changes.
- Worked with business to define appropriate test scripts in Azure Devops.
- Closely working with process owners, integration team, workday client and Dev team to deliver the project without INC.
- Under Recruitment process created Candidates, requisitions and Supervisory Organization analysis & creation managers, cost centers. Staffing models, jobs, positions, country, region, matrix supervisory organization.
- Implementing Tosca in Preboard & Onboard process in workday.
- Responsible for creating reusable test blocks under library, maintaining execution list, test events and screenshots.

Client: Citibank

Project Description

CITI Bank gives home Loans to the customers. We have done manual, ARD integration with Cucumber, NAQE, implemented toscan as well as database Testing to check the eligibility criteria for the customers and to verify the payment shortfalls with respect to the systems failure.

Key Responsibilities

- Worked Closely with BA, Client, project management to understand the requirements to bring out the cost cutting & time saving measures. Also worked across multiple scrum teams with a good exposure of requirement analysis, design, scripting, testing.
- Being SME of various Web based and mainframe application, single handed delivered various project without post INC.
- Identify the tools for Test Reporting, Test Management, Test Automation, etc. and educate the team on how to use those tools. Again, plan knowledge transfer sessions if required to the team members for the tools that they would use.
- Initiate the Test Planning activities for Test case design and encourage the team to hold review meetings and ensure that the review comments are incorporated.
- Worked on different reports with my manager like Estimation of test scripts, task allocation, Planview report, resource planning, efforts estimation report.
- Created Productivity report, time tracking, test deliverables, knowledge transfer documents and given demos to client, BA, Dev team for applications.
- Prepared the Daily status, weekly report, fetch data from ALM of different teams and share the report to clients to help in calculating productivity, efficiency, target cycle on a weekly/monthly basis and share it with all the stakeholders highlighting all the risks and issues.
- Implemented Tosca and created Modules by Scanning Elements using Tosca Commander (XScan) and Tosca Wizard - Classic Engine. Automated test scripts using scanned modules and standard Tosca modules. Preparation of "Test Case Design" and for data driven test approach. Created Execution Lists, executed test cases and verified the actual results.
- Well acquainted with STLC, scrum, agile, Waterfall and defect lifecycle terminologies.
- Created scripts by using Agile requirement design tool and also implemented ARD integration with Cucumber, NAQE automation engine in the project which includes end to end testing by creating scripts in HP ALM and executing the test scripts by automation.
- Performed Functional, regression, smoke, sanity, system, integration and DB testing.
- Handled multiple teams at one time and provided KT to all the freshers in the team.
