Programming languages:	C, Java and Apex
UI Technologies:	Salesforce Lightning Aura Framework, VisualForce, web services
GUI Tools/Scripts:	XML, HTML, JavaScript
Version Control:	GitHub
IDE's:	Visual Studio Code, Sublime Text

CERTIFICATIONS:

• **Salesforce Platform Developer 1** certified (Credential ID:-20142278)

PROFESSIONAL EXPERIENCE:

Project #1:- (Jun '20- Till Date)

Project Name:- GPM and Pricentric Data integration
Environment:- Salesforce
Role:-Sr Software Developer
Client:- Servier, Abbott
Description:- The SFDC GPM application is integrated with an external system using apex REST services. Pricentric is an external system which contains the latest prices of all Pharma products of

different companies in the world, This data is collected from pricentric into the salesforce GPM objects.

Responsibilities:-
• Developing a Rest callout to an external system.
• Efficiently using Batch apex to collect millions of data from external system.
• Scheduling the batch job which is used to collect incremental data from external system.
• Configuring named credentials and custom settings which are used in code.
• Developing test classes which covers more than 90% of code.
• Deployment into production from UAT.

Project #2:- (Dec '19- May '20)

Project Name:- GPM Instance Separation
Environment:- Salesforce
Role:- Sr Software Developer
Client:- Alcon, BMS
Description:- This project deals with implementing of GPM in a new salesforce Org separating a specific business data.
Responsibilities:-
• Use of Ant migration tool and a third party tool called gearset to perform deployments.
• Developing SOQL queries to extract data from a salesforce instance.
• Using Data Loader efficiently to load the extracted data into new instance.
• Configuring single sign on as per the business requirement.

Project #3:- (May '19- Nov '19)

Project Name:- Global Pricing Management System
Environment:- Salesforce
Role:- Software Developer
Client:- Novartis, BMS, Pfizer
Description:- Global Pricing Management (GPM) is the only enterprise-grade SaaS solution focused on reducing the risk of price erosion by helping you make best pricing decisions all the time and maximizing your global revenues in the process.
Responsibilities:-
• Developing custom logics using apex to manipulate data as per the business requirement.
• Creating reports and dashboards on some objects.
• Use of community cloud to give access to a community portal to some users
• Creating Email Templates to send notifications to the users.
• Developing Batch class which calculates the impact of price change to a product in a country and moves it to auto approval accordingly.
• enhancement of existing lightning UI.

Project #4:- (Nov '18- Apr '19)

Project Name:- Human Resource Management System
Environment:- Salesforce
Role:- Software Developer
Client:- Model N
Description:- This application is used by the human resource team that includes many automated functions such as payroll generation, employee performance tracking system etc.

Responsibilities:-
• Using the OOB salesforce features such as process builders, flows, Approval Processes to automate some business processes.
• Developing custom Lightning Pages to display data and also creating search filters.
• Use of Batch apex to process bulk number of records at a time using custom logics.

EDUCATION:

BTech in Electronics and Communication Engineering (VR Siddhartha Engineering College) (2014-2018)
