Sales force Technologies	Lightning Component Bundles, All Configuration, APEX Language, SOQL, SOSL, APEX Trigger, APEX Classes, Visual Force (Pages, Components & Controllers), APEX data loader, Process Builder, Workflow & Approvals, Dashboards, Reports, customer Portal, CPQ, Quote line items, Price book, product, subscription and terms.
Force.com Tools	Apex Data Loader and Force.com.
IDE Environments	Apex Data Loader, Force.com., Workbench, Git, Learning Copado, Integration with Netsuite, Workato, Marketo

1. PROJECT OVERVIEW:

Rapid 7 – Lightning Synopsis:

Project	Rapid 7
Role	Developer
Duration	November 2018 to Present.

Nidhi Gupta
sfdc.nid09@gmail.com
+91- 7276885982

The Rapid7 Insight cloud collects data from across your environment, making it easy for teams to manage vulnerabilities, monitor for malicious behaviour, investigate and shut down attacks, and automate your operations. Application uses Sales Cloud for Selling their Products in the Market for all regions. The implementation was in Force.com Lightning platform to handle the product creation. The application has multiple users and profiles based on their access level. The Application comprises multiple Lightning Components to handle Product creation & update using multiple raw materials. The system also uses an automation process (workflow, process builders) in multiple scenarios like while creating, updating products. The system triggers the email notification to users to inform system updates. System also keeps the history of data operation by Filed History Tracking functionality. The Application implementation was using Force.com like Lightning Components, Apex, Triggers, Batch Apex, Role Customization, Sharing Model, Workflows.

ROLES AND RESPONSIBILITIES

- Participated in Requirement Gathering & Supported Design Phase. Worked on Effort estimations ensuring timely delivery.
- Created multiple components and Apex classes.
- Created batch classes to handle bulk data & complex logic in asynchronous manner
- Configured Object, Field and Record Level Security using Profiles and Roles.
- Implemented Custom Labels and Custom Settings for referencing data sets across Apex Controllers.
- Created complex Triggers to generate the handle bulk data & generating Complex auto numbers.
- Worked on creating Validation rules and Workflows, process builders for different standard and custom objects to validate business data and logic respectively.
- Responsible for writing Unit Test Classes with code coverage of almost 90% for all the customizations across Force.com.
- Deployed data across multiple sandboxes using Data loader, Data loader, import-export wizard.
- Used Field history tracking for reporting purpose of audit.
- Created wrapper classes to handle data of multiple objects.

2. PROJECT OVERVIEW

Alley Pulse (ALE) – Classic

The Salesforce application has been implemented in Force.com platform to handle Product creation as requested by customer. The application has multiple users and profiles based on their access level. The Application comprises multiple Visualforce Pages & Component to handle Product creation & update using multiple raw materials. The system has different processes in multiple scenarios like while creating, updating products. The system generates the Design Output (DO)/Quotation in PDF format to send it to customers via email. System also keeps the history of data operation by Filed History Tracking functionality. The Project has been
