PROJECTS UNDERTAKEN:

TITLE: DRIVERLESS METRO TRAIN

Description   As automation increases in train services, this project resulted in making a driver-less train. The main purpose was to see how security can be increased. By using sensors, today's technologies and rebuild the stations with walls on the platforms, the safety can increase for the better. This project designs a railway system consisting of a train, boom barriers and a station. Ultrasonic- and IR-sensors were used to detect if obstructions were located on the rails and to detect the oncoming train at the railway crossing..

Strengths:

- Ability to work well with all levels of professionals.
- Team player, Share with other ideas.
- Ability to learn quickly new technologies.
- Positive attitude and good sense of humor.
