INVENTIV(SYNEOS) TELESOLUTIONS

Key objective of this project is to manage and track the tele solution business, agent activity and provide robust communication solutions to the team management and users. I played a key role in developing various modules from scratch which added value to their business processes. This is my professional project.

DRILCO CRM SYSTEM

The key objective of this project is to manage and track business, employee activities, logistics and provide key insights and statistics of a globally spread company. A major part of their business tracking went through our CRM from inventory to services to logistics. I played a key role in developing various modules from scratch which added value to their business processes. This is my professional project.

MIGRATION GENIE

This project builds a Salesforce application which allows users to deploy metadata and migrate data between two orgs. Also, it compares pre-specified components from 2 different orgs.

GOOGLE LENS PROTOTYPE (Current Individual Project)

Real time image tagging with camera app. Tagging will be based on multiple parameters and variables like direction, location, 3D axis and insights.

RHEUMATOID ARTHRITIS DETECTION (PROTOTYPE)

Application for Rheumatoid Arthritis patients and doctors to track down the progression of the degree. Also fill the DAS 28 form using image processing. Also, Alexa integration (SEMICOLON Project competition).

BUSINESS INTELLIGENCE: INFERENCE DERIVING

Build a network graph models between employees to find key influencer using the Enron emails corpus. To represent the communication pattern of the Enron emails in a graphical form and derive inferences from it. (Persistent Internship project).

REAL TIME HAND GESTURE RECOGNITION SYSTEM

To design a robust, scalable and computational efficient system of real time hand gesture recognition system for dynamic application.

CLOUD GCM

Cloud GCM aims to build a scalable and flexible infrastructure for data storage services. This development will enable the users to store, share and process data (multimedia) on the internet using cloud management system.
