SSC from ST. Therasas English Medium High School 2011, with 75%.

PROJECTS PROFILE

Project: 1

Project name : **Carbanio**
Client : **Carbanio**
Team size : **4**
Technology used : **manual testing**

Project Description:

Carbanio is an E-commerce website where user can Buy/Sell their products. Carbanio is the first B2B marketplace which supports both Chemical industry and Academia to strengthen research & innovation. We strongly believe that Chemical industry needs a service that would help buyers of chemicals procure products from multiple sellers without much hassle. Our team understands the problem at hand and wants to offer a unique experience to customers - something will enable all the parties in the industry (buyers and sellers) digitize their sourcing process. Carbanio's goal is to create a channel for buyers where they have access to multiple sellers under one roof and have the power to select the option that works best. Buyers can rest assured about the purity of the chemicals while comparing prices offered by various vendors. Carbanio lists chemicals that sellers already have in stock, thereby doing away with the whole waiting period where the buyer has to anxiously wait for two to three weeks for the seller to procure the requirement. Digital payments reduce the time needed to procure a certain chemical and we deliver to your doorstep, saving you from worrying about the shipping.

Carbanio works wonders for sellers as well by being a true sourcing partner for Small Quantity Chemicals and Bulk Quantity Chemicals. With guarantees for purity, sellers would be able to reach out to a global network on a platform that is trusted by both buyers and sellers. As a seller, you would have access to a larger market and receive customer feedback to help improve your services. Since the buying cycle is shortened, sellers can increase the volume of their business and profits!

Carbanio believes in continuous research and development to further strengthen the industry. To this effect, it encourages industries to offer free chemicals they no longer need to institutions

for research. While helping the industry move forward, this will give academicians and students a chance to collaborate with industry professionals and form a mutually beneficial symbiotic relationship where the industry benefits from academia and academia benefits from the knowledge of industry stalwarts.

Roles & Responsibilities:

- Analysing the requirements using Functional Specifications documents
