### **PROFESSIONAL EXPERIENCE**

**Walmart Logistics | Mount Crawford, VA**

**8/2014 – Present**

#### **IT/Data Center System Operation Analyst (DC-SOA)**

Work closely with other team members/stakeholders to develop/deploy web-based applications and programs to support logistics/supply chain processes; designing solutions by analyzing systems and business requirements obtained from customers & end-users. Guide/train associates and management teams on program use, serving as technical support for day-to-day operations; providing technical expertise on troubleshooting for hardware and software applications to ensure workflow across logistic operations.

- Impacted IT/Data Center system operations by leading/training key data center team members (e.g., machine operators, analyst, network coordinators) on new systems & technologies; ensuring adherence to the company's SOPs & engineering standards (ES).
- Data entry of user's information into the database system, analyzing metrics data to improve network efficiencies; while tracking process workflow, identifying performance issues/risks as well as recommending solutions/feedback to management.
- Point of contact for updates to the system and application software, handling software upgrades, deployment, and maintenance.
- Input data into system database and set/configure/run Android applications on handheld mobile devices.
- Produced accurate workflow reports using business intelligence tools to improve organization, performing workflow analysis using business analytics tools to improve team productivity and ensure proper job function distribution among different departments.
- Managed warehouse data center operations, including functionalities; exceeding the demands of internal customer's needs.
- Installed/configured IT-related hardware and software applications for the warehouse distribution center and overall enterprise.
- Managed Walmart's Warehouse Management Systems, Sortation Systems, Voice Systems, and Labor Management System; ensuring efficiency in supply chain management (SCM) systems via updates/patching and producing comprehensive reports.
- Customer service leader interacting with a broad range of vendors and customers on daily basis via email/phone communications.
- Procurement analyst responsible for ordering supplies for the entire warehouse, ensuring teams are supported effectively.
