- **FRW**

- The project is focused on developing lightning web components and apex classes to support the business functionality.
- Custom objects and custom fields were created to store the data coming from the REST APIs.
- Batch and scheduled apex classes were created to sync the data with the backend external system.
- A series of LWC components were developed to fetch and display data from the REST APIs and from within Salesforce and then embedded those components in Salesforce Community.
- Configured the Salesforce community, users and profiles to control the visibility and accessibility of certain components and records.
- Used data loader to import and export the data from salesforce.
- Used git for version controlling.

- **Client Support**

- The project focuses on providing the client support work and resolving the issues that came in from the support end and working on the new functionalities as per the requirements.
- Created a registration form in LWC for the community.
- Upgraded some visualforce pages to lightning pages using LWC.
- Worked on profiles, permission sets, page layouts, actions etc. as per the client needs and requirements.
