Projects

ClaimVision Production Support (Insurance Domain)

ClaimVision Production Support is a prod support project for CR's and Production defects to be tested in test environment and providing QA sign off post validation of the fixes/changes to be deployed in production

Tools and Technologies

Manual - HP- QC , WinSQL , Mainframes Network Run

Automation - Eclipse , SeleniumWebdriver (using Java)

Project Responsibilities:

- Coordinating with onsite co-coordinator for CR's clarification.
- Analysis of functional designs, requirements for development of test strategy

- Creating test scenarios and test cases for CR's and Production defects. Raising defects, linking it to test case and its management in HP ALM.
- Understanding the requirements for automation, creating data and automation script .

Predictive Modeling Bodily Injury : Rel-1B (Insurance Domain)

PMBI in Claim Connect Application is a Data Analytics Testing project which is basically inclined to triggering scores on Loss , Expense and SIU models. Apart from that the Bodily Injury variables were triggered on the models using text mining techniques , addition of Loss description and file notes.

Tools and Technologies

Manual - WinSQL , SQL Developer , Management Server Studio , Microsoft TFS, Qlik ,
Mainframes Network Run , PM Score Viewer , BI Models

Project Responsibilities

- Coordinating with onsite co-coordinator during the entire project for test plans, test designing and test execution.
- Creating test scenarios and mapping against requirement to create Requirement Matrix.
- Updating the customers , stakeholders ,business users on the project status on call daily basis and status Reports on weekly basis.
- Responsible for raising defects in Microsoft TFS and linkage of Test cases and Requirements
- Automation feasibility and preparation/presentation of Automation Proposal.
- Understanding the requirements for automation, creating data and automation script .

CVAC-Auto (Agile based Insurance Domain)

The CVAC-Auto is an Agile Scrum project with 2 weeks of each sprint. It is a core project for Claims where the Commercial business Policy source were being upgraded from Legacy source to Genius and then to ATLAS. The project is executed to ensure that the Legacy Claims application works with the new new Policy source ATLAS. It involved the System testing where the data validation of policy details from ATLAS were validated for the claims in the UI. Apart from this as a part of E2E testing we used to to send claims data to CDW post the claims data is processed through Mainframe batch jobs.

Tools and Technologies

Manual - JIRA , WinSQL , Mainframes Network Run , Management Server Studio
Automation - Eclipse , SeleniumWebdriver (using Java)

Project Responsibilities

- Coordinating with onsite co-coordinator for sprint wise test case designing and execution.
- Representing QA team in Standup Call, Sprint Review Meeting and Sprint Retrospection Meeting
