Projects

3 Days

Risk Analysis & Auditing

PowerApps Application to identify risk and audit the predefined tasks with reporting dashboard.

6 Months

Angular | Node.js | ASP .net Core API Client Portal (Support Project With Sprint works)

Worked on the Multiple Application Support Project, which involved handling work items based on Sprint Planning. The portal tech stack used includes Angular, ASP.Net Core API, Node.js, AWS Lambda, API Gateways, Serverless Functions, and Postgre SQL

Collaborated with the security team and testing team to fix all the security vulnerabilities and conducted thorough testing to ensure the application's robustness and reliability.

2 Months

Power BI Report Embedded in Angular Portal

- Developed a comprehensive 2-page report in Power BI, utilizing data sourced from an Onpremise managed SQL database through Data Gateways.
- Successfully converted a Figma design into an interactive Power BI report.
- Integrated the Power BI report seamlessly into an Angular portal using Iframe.
- Utilized M-language and data model design techniques to optimize the DirectQuery connection with the SQL database.
- Effectively utilized SQL Tables and Views to streamline the reporting process.
- Achieved significant improvement in data visualization and reporting efficiency.
- Enhanced data-driven decision-making process through insightful and accurate reports
- Streamlined the overall reporting workflow for improved business analytics.

10 Weeks

Refer Portal Internal - (Power Apps Open for all Employees) with Admin support

- Developed and implemented the internal job referral portal using Power Apps, with the support of the administrative team.
- Streamlined the job posting process by allowing the admin team to upload job details through a templated Excel sheet in SharePoint
- Automated the migration of all job data into the database using Power Automate flows, ensuring efficient and accurate data transfer.
- Enabled normal users to refer candidates based on the job profiles displayed within the Power Apps application.
- Implemented a feature that allows users to track the status of their internally referred candidates, using unique Candidate IDs.
- Improved the overall efficiency of the internal job referral process and enhanced user experience.

8 Months

(PowerAutomate) Teams Reminder Pings feedback for KT Transition & Access on tools status provide

Implemented Power Automate in Teams to send reminder pings for KT transition and check if KRs have access to tools through the PowerApps Portal. Successfully developed and maintained two applications for a single client on different scenarios. Scheduled Power Automate based on timezone to ensure timely delivery of KT reminder pings. Integrated business logic and validation for KRs and provided clickable links in the pings for easy access to the PowerApps Portal and status filling and get feedbacks.

60 Days

(PowerApps) New Joinee integration Portal

Implemented PowerApps Canvas project for new joiners integration plans created by HRs and leadership. It efficiently maintains all integration processes, sends reminders to new joiners for pending tasks and mandatory calls, and tracks all activities within a single portal.

14 Months

Automation in migration And reporting

Migration of 1K-2K SharePoint sites daily by creating a project that automates the migration Process using Windows PowerShell scripting and Asp.net programs, also used MS SQL that supports states and staging in our migration Process.

14 Months

SharePoint Sites Migration

Sites are migrated in Waves and its Batches (30 sites in batch). end to end Verification of each site and remediate if any mismatches in sites. Tool used: - Quest Metalogics and Sharegate

120 Days

Training

Trained on C#, Asp.net and SharePoint CSOM, JSOM, also created a project (custom pages for list data CRUD operations). Developed MFRP (My First Real Time Project) on CRUD operation in ADO.net using ASP.net Application. Created 50+ Logical C# programs

90 Days

Mechanism to avoid duplication of beneficiaries of various welfare schemes (Major Project)

This project is Designing an API that keeps track of the user registration in welfare schemes and providing appropriate decisive response to the government welfare sites. The candidates who are already benefited under one welfare scheme may not receive benefit under another welfare scheme for a time period so as to maximize the number of candidates benefited by the government. And government will get proper format of analytical report about the citizens interest in beneficiary schemes and total funds invested by government on interval basis.

60 Days

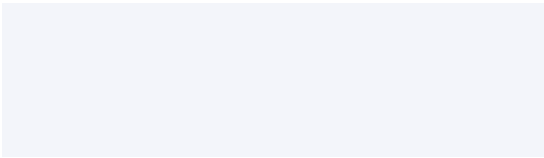

Placement Guru (Node JS training Project)

NodeJS based website of placement online test These contain following modules ?? Online MCQ test (profile based) ?? Embedded compiler to test skills of a student. ?? Tutorials to increase skills

0 Days

Store management system in C++, backend with file handling

Main objective of project was to stores that deals in college stationaries and other such shops, this helps in maintenance and

billing of stocks. Application comes with the master entries that enable to enter new products or customer entry to modify, delete and add.
