PROJECT

Insurance Domain (11/2019 - 11/2021)

The client wants to empower the developers to eradicate the coding needs to develop an attractive, smooth, and hassle-free UI. As it is a big account, several teams are working on the same project within the Atos on different modules. As mentioned earlier, clients want to ease the life of Salesforce where they can create the UI and integrate it with both Sobjects and external systems to get and post the data; this tool is known as UIFramework. The client also wants to have an application where they can store the data of the background of their employees. As per the requirement, the background check can be done in two ways: the first, a user from the client will do the task manually and store the data within the application manually; another one, their salesforce system will fetch data from the applications like Linkedin.
- Role: Junior Developer
- Team Size: 12

Philips (12/2021 - Present)

Philips deals in selling health care products to various hospitals, setting up environment for hospitals across globally. Services delivered by Philips to its clients globally are geographically categorized as markets. Philips wants to make life of business, who sell its products to clients and the end customers life easy through Salesforce. We get requirement from business from a specific market, we take it as a new feature and built in agile model and interact with client and deliver the things as require for end business. We here quickly adapt to any change in requirement and deliver the things in a smooth manner.
- Role: Salesforce Consultant
- Team Size: 10
