TECHNICAL PROJECTS

- **Event Management System:** Event Management System is developed as a web-based application developed in Java programming language. It facilitates online registration cum feedback evaluation for different kinds of events such as games, workshops, and seminars. The project's main objective is to control or manage the activities and duties to be preformed by various event conductors such as attendees, organizers, event reviewers, and authors.
- **Face Recognition System:** Face recognition is one of the most important biometrics methods. Despite the fact that there are more reliable biometric recognition techniques such as fingerprint and iris recognition, these techniques are intrusive and their success depends high cooperation. Therefore, face recognition seems to be the most universal, non-intrusive, and accessible system. It is easy to use, can be used efficiently for mass scanning, which is quite difficult, in case of other biometrics.
