WCS developer tool

Projects Handled

Name: Equifax Atlas (Contract To Order)

Equifax Atlas is an application system developed to enable and maintain the data of Equifax customers. The Atlas system consists of C2O and PM. This system enables an end to end management by providing the ability to create a contract, adding required products and customer billing/ shipping locations and generating an order which is eventually send for provisioning and later billing and invoicing.

Role: Developing and maintaining C2O module.

Name: Global Online Store Support

Emerson has decided to implement IBM Web Sphere Commerce (WSC) as part of their digital customer experience to provide one Emerson experience to its customers. Emerson Automation Solution uses Oracle EBS R12 as their core transactional system. The WSC store is integrated with EAI as middle ware for data flow and ISG is the backend layer of Oracle which from where EAI makes Asynchronous and synchronous calls for getting requested data.

Role: Developing and maintaining product advisor module. Follow RFC process for code migration from development to production environment. Track issue with HPSM and Emerson Service Now (SNOW).

Name: DMCPA

DMC has developed Oracle iStore providing various functionalities like Product Catalog, Product details, Sizing, Reports etc. and make it available to various types of users

Name: TNPL CRM

TNPL CRM is a Mobile application developed using ADF REST Services and Java Script. The End User is dealer's and marketing executives of Tamil Nadu Paper Limited (**TNPL**). With the help of this application the dealer can place their order anywhere in the world using their smartphone. The marketing Executives can approve the dealer's order and review each and every dealer's performance.

Name: Aura Connect

Aura Connect is a mobile application which gives all the product details of TNPL about their marketing Team. It's also works on **ADF REST** services.

Name: Chola ERP

Chola ERP is the ERP product which is delivered to and used by 4 companies. It is complete packaged software for all types of Industries like apparels, constructions, fleet management etc. It is also web enabled, **J2EE** application developed in Oracle ADF Faces and Web services.

Role: Developing and maintaining CRM module. It includes creating sales and purchase forms, extracting data from the data base using pl/sql query. Handling the sales and Purchase flow.

Name: Promapro

Promapro is **Oracle ADF** based enterprise web enabled **J2EE** application, which is developed based on agile development approach. This application is a project management tool which has the capacity to help plan, organize and manage resource tools and develop resource estimates. Technology we used for **Promapro** is **Oracle ADF Faces, Web Service** based web application on **Oracle11g** database.

Role: Developing and maintaining task module. Task module include Gantt chart, time calculation etc. In task module worked with automatic task assigning and manual task assigning as per the requirement.
