Online Invoicing Portal

Team size: 4

Role: Sr. Developer

Duration: 1.5 Years

Online Invoicing portal is community used to communicate with firms asking to pay annual fees, see and print your invoices in PDF form, credit notes and payments & many more. Used three integration systems (pxp, workday & FDR), It is fully developed in LWC & fully depend on third party system.

My work as Sr. Developer in Fees Portal Includes.

- Gathering & understanding the Requirement & design and architecting projects.
- Effort estimations ensuring timely delivery.
- Gathering requirement for system and building and innovating quick demos.
- Develop the reusable components & give training for the same to team members.
- Playing role of admin, developer, solution architect, team lead.
- Implementing end to end solution including Creating community, LWC components, email services, integration & automation processes and many more.
- Taking care of post deployment activates after every release.
- Assigning the task to team members & doing code review of their work.

Financial Services Register

Team size: 5

Role: Developer

Duration: 6 months

In the UK, nearly all financial service activities must be authorized by the Financial Conduct Authority. We can search the register for firms and individuals and the activities firms have permissions for. Fully developed in Aura Framework with all accessibility compliances & Visual design standards.

My work as Sr. developer in FSR Includes.

- Understand the requirement with business and team.
- Designing the solution approach, reusable components & build a framework.
- Played the role of developer & maintain the change log steps.
- Creating project plan/estimation, creating classes & test classes, lightning components, community site, documentation for the framework structure & doc for post deployment activities etc.

Connect

Team size: 3

Role: Developer

Duration: 2 Years

Connect is an online system that you can use to submit applications and notifications. It is government organization of UK which gives authority for firm creation. The solution is made up of community site for different types for users, which help the user to establish the firm by submitting

the forms and paying bills. We created the form framework and form 360 framework using lightning component which are reusable for any kind of project.

My work as Sr. developer in Connect Includes.

- Understand the requirement with business and team.
- Designing the solution approach.
- Played the role of admin & developer.
- Creating project plan/estimation, object structure, creating classes, lightning components, community site etc.
- Worked on end to end solutions on different modules of project.
- Implemented form framework & form 360 framework using lightning component.
- Presenting the solution to business.
- Unit testing deployment activities.
- Code review of team mates.

Prescient Colors Ltd.

Team size: 3

Role: Developer/Support

Duration: 10 months

‘Prescient Colors Ltd’ is a company running textile business, they use excel for their day to day tasks. All business works on excel sheet only. We have converted the excel business in Salesforce.

My work as developer in PCL Includes.

- Understanding the Requirement & help in Design and architecting projects.
- Effort estimations ensuring timely delivery.
- Gathering requirement for system and building and innovating quick demos.
- Working with internal team for proposals.
- Playing role of admin & developer.
- Implementing end to end solution including Creating Visualforce pages, email services, visualforce components & automation processes and many more.

Diabetes Victoria Clothing collections

Region: US.

Team Size : 2

Diabetes Victoria maps their Clothing Collection routes on a Google map (Public site via email) which the truck driver uses on their android devices to plan their daily runs and pick up used clothes from people's homes.

Drivers can able to map their collections on a map, be suggested a route to go to all the homes in an area for collection, be given driving instructions and allow update to Salesforce via a web form for whether pickup completed or if not, pick list of values for why not. This update will show them only the remaining points on the map that need pick up leaving at the end of their pick up run.

My work involved various activities

- Gathering requirement, creating business requirement document.
- As this project is handled by me only with the help of JS developer.
- Creating project plan/estimation, object structure, creating classes, pages, public site, automation processes (workflow, process builder) and unit testing i.e. I worked on all

phases

- Presenting deliverables to client

Map Plotter Premium (AppExchange Product)

It is the premium version of Map plotter AppExchange app. It having all features of map plotter and additional features like it support standard and custom objects, field mapping of object is available for geocoding the address, trigger activation/deactivation, multiple ways of filter your data like based on country-state-city hierarchy, based on global search and filter search functionality where creating filters with different colors to each filter, clustering the markers on map, get direction with multiple points with alternate routes, print direction

My work as developer includes.

- Designing the system includes creating objects, pages, classes, workflows, email templates, writing scheduler
- Created trigger dynamically.
- Used Google Map API services and weather API services .
- Submitting the code for checkmarks review.
- Played a role of team leader, giving training, guiding, taking status of every day from trainees.
- Attending client call & fixing the issues they are facing.

Map Plotter (AppExchange Product)

Team size: 1

Role: Developer/Support

Duration: 6 months

Is an AppExchange product which helps you to plot your sales data on Google map, you can see the directions between two points. It is mainly build on accounts, contacts & leads data. When you click on any marker you can see record details, food & stay near to that point & current weather information.

Role:

- Implementing the new features in the system.
- Releasing the patches with new upgrades with API's of google & weather API.
- Taking support call & fixing the issues.
- Code optimization & applying security check as per AppExchange best practices.

Ezee Track

Team size: 3+

Role: Developer

It helps to manage the resources in an organization. The resources are the sharable devices like mobile, printer etc. for which user can demand the access for some time period like no of days. So user can check the availability of resource, book the resource, edit the booking, cancel the booking & return the device.

There are different accesses to user based on profile. Admin having all access & for other than admin user has limited access. Non admin user can search & book resource through custom UI

also.

Role:

- Requirement gathering, design and development of data model
- Development of lightning app & reusable lightning component.
- Used lightning design system in lightning components.
- Learned the lightning & lightning best practices.

Other Internal Projects :

- Book My Show application using **lightning web component**.
- Worked on '**Integration and use of Box.com** cloud with Salesforce as a storage space' and learned the box.com domain.
- Worked on '**LMS with LDS**' from this I learned Lightning design system, where to use & how to use.
- Also worked on '**Step up tracking Application**' which helps to track the step up activities with rating per session. I learned box.com integration & access permissions
- **Lead to Opportunity Converter**: App provides you the simple and easy way to convert the lead into Account, Contact and opportunity. We came up with less data entry operation & only required data on page.

Integrations done so far:

1. Apigee Integration

Used Apigee integration to connect with PXP, workday & FDR system.

2. Box.com

Integrated Box.com with Salesforce to overcome the limit of content size in Salesforce. It helps directly upload/bulk uploads the data in box.com through Salesforce.

3. Google Map

Done integration with Google Map. To get the latitude & longitude of address, plot the data on Google map, get the direction between two points.

4. World Weather API

Used forecasting weather API to get the weather information of particular region/area by passing latitude & longitude.
